## 1 Introduction

This manual is for Power Meter models PW3336(-01, -02, -03) and PW3337(-01, -02, -03).

Messages are provided in the interface to control the Power Meter.
There are two types of messages: program messages that are sent from the controller (such as a computer) to the Power Meter and response messages that are sent from the Power Meter to the controller.
There are also execution confirmation messages for synchronization with the controller in the RS-232C interface.

Message types are further categorized as follows.

When issuing commands that contain data, make sure that the data is provided in the specified format.
When connecting via LAN, connect to TCP/IP port 3300. LAN
NOTE
During communication the Power Meter will enter the Remote state and the REMOTE Indicator on the unit will turn ON.
When this occurs, all operation keys except for SHIFT(EXIT/LOCAL) will be disabled.
However, if the Power Meter is in the Local Lock Out state via GP-IB (GP-IB command LLO:Local Lock Out -> P.12), the SHIFT(EXIT/LOCAL) Key will also be disabled. If this occurs, execute the GTL (Go To Local) interface function or turn the Power Meter OFF and ON again to return to the Local state.

If the Power Meter enters the Remote state when on the settings screen, it will automatically change to the measurement display.

## Message Format

## - Program Messages

Program messages can be either Command Messages or Query Messages.
(1) Command Messages

Instructions to control the instrument, such as to change settings or reset
Example: Instruction to set the voltage range (ch1).

(2) Query Messages

Requests for responses relating to results of operation or measurement, or the state of instrument settings
Example: Request for the current measurement range
:VOLTAGE1:RANGE?
$\begin{array}{cc}\stackrel{\mathbf{A}}{\text { Header portion }} & \stackrel{-}{\boldsymbol{\sim}} \\ \text { Question mark }\end{array}$
See: "Headers (p. 2)", "Separators (p. 3)", "Data Formats (p.4)"

- Response Messages

When a query message is received, its syntax is checked and a response message is generated.-
The :HEADer command determines whether headers are prefixed to response messages.
Header ON
:VOLTAGE1:RANGE 300
Header OFF
300
(The current voltage range for ch1 is 300 V .)

At power-on, Header ON is selected.
If an error occurs when a query message is received, no response message is generated for that query.

## - Command Syntax

Command names are chosen to mnemonically represent their function, and can be abbreviated. The full command name is called the "long form", and the abbreviated name is called the "short form". The command references in this manual indicate the short form in upper-case letters, extended to the long form in lower case letters, although the commands are not case-sensitive in actual usage.

| DISPLAY? | OK (long form) |
| :--- | :--- |
| DISP? | OK ( short form) |
| DISPL? | Error |
| DIS? | Error |

Response messages generated by the instrument are in long form and in upper case letters.

- Headers

Headers must always be prefixed to program messages.
(1) Command Program Headers

There are three types of commands: Simple, Compound, and Standard.

- Headers for Simple Commands

This header type is a sequence of letters and digits.
:ESE0

- Headers for Compound Commands These headers consist of multiple simple command type headers separated by colons ":".
:VOLTage1:RANGE
- Headers for Standard Commands

This header type begins with an asterisk "*", indicating that it is a standard command defined by IEEE 488.2. *RST
(2) Query Program Header

These commands are used to query the instrument about the results of operations, measured values, and the current states of instrument settings.
As shown in the following examples, a query is formed by appending a question mark ? after a program header. :HOLD?
:VOLTage:RANGe?

Characters within square brackets [ ] may be omitted.

# :MEASure[:NORMAL]:VALue? $\longrightarrow$ :MEASure:VALue? 

## - Message Terminators

The instrument recognizes the following message terminators (delimiters):

## RS-232C

## GP-IB

## LAN

- LF
- LF
- CR+LF
- CR+LF
- EOI
- LF with an EOI

Depending on the instrument's interface settings, the following can be selected as the terminator for response messages.
For information on settings, see "Terminator Setting" (p. 107).

## RS-232C

## CP-IE

- LF with an EOI LAN
- CR + LF with an EOI (default)
- LF
- CR+LF (default)

## - Separators

(1) Message Unit Separator

Multiple messages can be written in one line by separating them with semicolons ";".

## :VOLTage1:RANGe 300;:AVERaging 10

- When messages are combined in this way and if one command contains an error, all subsequent messages up to the next terminator will be ignored.
(2) Header Separator

In a message consisting of both a header and data, the header is separated from the data by a space
" " (ASCII code 20H).
: VOLTage1: RANGe 300
(3) Data Separator

In a message containing multiple data items, commas are required to separate the data items from one another.
:MEASure? U1, I1

## Data Formats

The instrument uses character data, decimal numeric data and character string data depending on the command.

## (1) Character Data

Character data always begins with an alphabetic character, and subsequent characters may be either alphabetic or numeric. Character data is not case-sensitive, although response messages from the instrument are only upper case. When the command data portion contains $<1 / 0 / O N / O F F>$, the operation will be the same as when 0 is OFF and 1 is ON.

## :HEADER OFF

(2) Decimal Numeric Data

Three formats are used for numeric data: NR1, NR2 and NR3. Numeric values may be signed or unsigned. Unsigned numeric values are handled as positive values. Values exceeding the precision handled by the instrument are rounded to the nearest valid digit.
-NR1 Integer data (e.g.: +12, -23, 34)

- NR2 Fixed-point data (e.g.: +1.23, -23.45, 3.456)
- NR3 Floating-point exponential representation data (e.g.: +1.0E-2, $-2.3 \mathrm{E}+4$ )

The term "NRf format" includes all three of the above numeric decimal formats.
The instrument accepts NRf format data. The format of response data is specified for each command, and the data is sent in that format.

## :AVERAGING10

The instrument does not completely support IEEE 488.2. Use referenced data whenever possible. Also be careful not to overflow the input buffer or output queue with a single command.

## Compound Command Header Omission

When several commands having a common header are combined to form a compound command (for example, :VOLTage1:AUTO and :VOLTage1:RANGe), if they are written together in sequence, the common portion (here, :VOLTage1:) can be omitted after its initial occurrence.
This common portion is called the "current path" (analogous to the path concept in computer file storage), and until it is cleared, the interpretation of subsequent commands presumes that they share the same common portion.

This usage of the current path is shown in the following example:
Full expression
:VOLTage1:AUTO OFF;:VOLTage1:RANGe 300

## Compacted expression

## :VOLTage1:AUTO OFF;RANGe 300 <br> 

The current path allows you to abbreviate the next command.

The current path is cleared when the power is turned on, when reset by key input, by a colon ":" at the start of a command, and when a message terminator is detected.
Standard command messages can be executed regardless of the current path. They have no effect upon the current path.

A colon " $:$ " is not required at the start of the header of a Simple or Compound command. However, to avoid confusion with abbreviated forms and operating mistakes, we recommend always placing a colon at the start of a header.

## Output Queue and Input Buffer

## - Output Queue

Response messages are stored in the output queue until read by the controller. The output queue is also cleared in the following circumstances:

- Power on
- Device clear

## GP-IE

- Query error

The output queue capacity of the instrument is 4,096 bytes. If response messages overflow the buffer, a query error is generated and the output queue is cleared.

## Input Buffer

The input buffer capacity of the instrument is 1,024 bytes.
If 1,024 bytes are allowed to accumulate in this buffer so that it becomes full, the GP-IB interface bus enters the waiting state until space is cleared in the buffer.
The RS-232C and LAN interfaces will not accept data beyond 1,024 bytes.
Note: Ensure that the length of a single line never exceeds 1,024 bytes.

## Status Byte Register

The instrument uses the status model defined by the IEEE 488.2 standard for items related to serial polling via the service request function.
Events are what trigger service requests.

Overview of Service Request Occurrence
The Status Byte Register contains information about the event registers and the output queue.
Required items are selected from this information by masking with the Service Request Enable Register.
When any bit selected by the mask is set, bit 6 (MSS; the Master Summary Status) of the Status Byte Register is also set, which generates an SRQ (Service Request) message and dispatches a service request.

SRQs (Service Requests) can be used only with the GP-IB interface.
However, SRER setting (*SRE?) and STB read (*STB?) queries can be used even with the RS-232C and LAN interfaces.

## - Status Byte Register (STB)

During serial polling, the contents of the 8 -bit Status Byte Register are sent from the instrument to the controller. When any Status Byte Register bit enabled by the Service Request Enable Register has switched from 0 to 1, the MSS bit becomes 1 . Consequently, the SRQ bit is set to 1 , and a service request is dispatched.

The SRQ bit is always synchronous with service requests, and is read and simultaneously cleared during serial polling. Although the MSS bit is only read by an *STB? query, it is not cleared until a clear event is initiated by the *CLS command.

| Bit 7 |  | unused |
| :--- | :--- | :--- |
| Bit 6 | SRQ | Set to 1 when a service request is dispatched. |
| Mit 5 | ESB | This is the logical sum of the other bits of the Status Byte Register. <br> Standard Event Status (logical sum) bit <br> This is the logical sum of the Standard Event Status Register. |
| Bit 4 | MAV | Message available <br> Indicates that a message is present in the output queue. |
| Bit 3 | ESB3 | Event Summary (logical sum) bit 3 <br> This is the logical sum of Event Status Register 3. |
| Bit 2 | ESB2 | Event Summary (logical sum) bit 2 <br> This is the logical sum of Event Status Register 2. |
| Bit 1 | ESB1 | Event Summary (logical sum) bit 1 <br> This is the logical sum of Event Status Register 1. |
| Bit 0 | ESB0 | Event Summary (logical sum) bit 0 <br> This is the logical sum of Event Status Register 0. |

## - Service Request Enable Register (SRER)

Setting a bit of this register to 1 enables the corresponding bit of the Status Byte Register to be used.

## Event Registers

## Standard Event Status Register (SESR)

The Standard Event Status Register is an 8-bit register.
If any bit in the Standard Event Status Register is set to 1(after masking by the Standard Event Status Enable Register), bit 5 (ESB) of the Status Byte Register is set to 1 .

See: "Standard Event Status Enable Register (SESER)" (p. 9)
The Standard Event Status Register is cleared in the following situations:

- When a *CLS command is executed
- When an event register query (*ESR?) is executed
-When the instrument is powered on

| Bit 7 | PON | Power-On Flag <br> Set to 1 when the power is turned on, or upon recovery from an outage. |
| :---: | :---: | :---: |
| Bit 6 | URQ | User Request unused |
| Bit 5 | CME | Command error (The command to the message terminator is ignored.) <br> This bit is set to 1 when a received command contains a syntactic or semantic error: <br> - Program header error <br> - Incorrect number of data parameters <br> - Invalid parameter format <br> - Received a command not supported by the instrument |
| Bit 4 | EXE | Execution Error <br> This bit is set to 1 when a received command cannot be executed for some reason. <br> - The specified data value is outside of the set range <br> - The specified data cannot be set (data format discrepancy) <br> - Execution is prevented by some other operation being performed |
| Bit 3 | DDE | Device-dependent Error <br> This bit is set to 1 when a command cannot be executed due to some reason other than a command error, a query error or an execution error. <br> - An internal error occurred and execution cannot be performed (error displayed) <br> - A command was received that cannot be executed during a restricted operation (integration, hold, etc.) <br> - When "o.r","S.Err" or "-----" occurs and the error data is read by a *MEASure? query. |

## Query Error (the output queue is cleared)

This bit is set to 1 when a query error is detected by the output queue control.

- When an attempt is made to read the output queue when the output queue is Bit 2 QYE empty (GP-IB only)
- When the data overflows the output queue
- When the next command is received while there is data in the output queue
- When there is a query after a *IDN? on the same line.

## Bit 1 <br> RQC Request Control <br> (unused)

## Operation Complete

Bit 0 OPC
This bit is set to 1 in response to an *OPC command.

- It indicates the completion of operations of all messages up to the *OPC command

## ■ Standard Event Status Enable Register (SESER)

Setting any bit of the Standard Event Status Enable Register to 1 enables access to the corresponding bit of the Standard Event Status Register.

Standard Event Status Register (SESR) and Standard Event Status Enable Register (SESER)

Standard Event Status Enable Register (SESER)

## Device-specific Event Status Registers (ESR0, ESR1, ESR2, and ESR3)

This instrument provides four Event Status Registers for controlling events.
Each event register is an 8-bit register.

When any bit in one of these Event Status Registers enabled by its corresponding Event Status Enable Register is set to 1 , the following happens:

- For Event Status Register 0, bit 0 (ESBO) of the Status Byte Register (STB) is set to 1.
- For Event Status Register 1, bit 1 (ESB1) of the Status Byte Register (STB) is set to 1.
- For Event Status Register 2, bit 2 (ESB2) of the Status Byte Register (STB) is set to 1.
- For Event Status Register 3, bit 3 (ESB3) of the Status Byte Register (STB) is set to 1.

Event Status Registers 0 through 3 are cleared in the following situations:

- When a *CLS command is executed
- When an Event Status Register query (:ESR0?, :ESR1?, :ESR2?, or :ESR3?) is executed
- When the instrument is powered on

| Event Status Register 0 (ESR0) |  |  |
| :--- | :--- | :--- |
| Bit 7 | DataSet | Data updated. |
| Bit 6 | Change <br> Setting <br> Err | Data became invalid due to a hardware-related setting change. <br> (For example, immediately after the range was changed.) |
| Bit 5 | SyncErr | A synchronization error occurred on ch1, ch2, or ch3. |
| Bit 4 | IntegrateEnd | Integration has completed. |
| Bit 3 | AVeraGe <br> update | Averaged data updated. |
| Bit 2 | HIGH-Psum The total (sum) of the active power is o.r. (over range). <br> Bit 1 OverDatalntegrateA peak overflow of voltage or current occurred in the active <br> power integration value for total(sum). |  |
| Bit 0 | Ext.Sync Error | Failed external synchronization for the data update. |

## Event Status Register 1 (ESR1)

| Bit 7 | Frequency <br> Out of Range1 | The frequency of ch1 (voltage or current) is invalid. |
| :--- | :--- | :--- |
| Bit 6 | Over <br> Datalntegrate1 | A peak overflow of voltage or current occurred in the active power <br> integration value for ch1. |
| Bit 5 | CurrentOver <br> Datalntegrate1 | A peak overflow of current occurred in the current integration <br> value for ch1. |
| Bit 4 | Over-I1 | A peak overflow occurred in the current input on ch1. |
| Bit 3 | Over-U1 | A peak overflow occurred in the voltage input on ch1. |
| Bit 2 | High-P1 | The active power of ch1 is over range. |
| Bit 1 | High-I1 | The current of ch1 is over range. |
| Bit 0 | High-U1 | The voltage of ch1 is over range. |

Event Status Register 2 (ESR2)

| Bit 7 | Frequency <br> Out of Range2 | The frequency of ch2 (voltage or current) is invalid. |
| :--- | :--- | :--- |
| Bit 6 | Over <br> Datalntegrate2 | A peak overflow of voltage or current occurred in the active power <br> integration value for ch2. |
| Bit 5 | CurrentOver <br> Datalntegrate2 | A peak overflow of current occurred in the current integration <br> value for ch2. |
| Bit 4 | Over-I2 | A peak overflow occurred in the current input on ch2. |
| Bit 3 | Over-U2 | A peak overflow occurred in the voltage input on ch2. |
| Bit 2 | High-P2 | The active power of ch2 is over range. |
| Bit 1 | High-I2 | The current of ch2 is over range. |
| Bit 0 | High-U2 | The voltage of ch2 is over range. |

Event Status Register 3 (ESR3)

| Bit 7 | Frequency <br> Out of Range3 | The frequency of ch3 (voltage or current) is invalid. |
| :--- | :--- | :--- |
| Bit 6 | Over <br> Datalntegrate3 | A peak overflow of voltage or current occurred in the active power <br> integration value for ch3. |
| Bit 5 | CurrentOver <br> Datalntegrate3 | A peak overflow of current occurred in the current integration <br> value for ch3. |
| Bit 4 | Over-I3 | A peak overflow occurred in the current input on ch3. |
| Bit 3 | Over-U3 | A peak overflow occurred in the current input on ch3. |
| Bit 2 | High-P3 | The active power of ch3 is over range. |
| Bit 1 | High-I3 | The current of ch3 is over range. |
| Bit 0 | High-U3 | The voltage of ch3 is over range. |

Event Status Register 0 to 3 (ESR0 to ESR3) and
Event Status Enable Register 0 to 3 (ESER0 to ESER3)
Status Byte Register (STB)

Event Status Enable Register 3 (ESER3)

## - Register Reading and Writing

| Register | Read | Write |
| :--- | :--- | :---: |
| Status Byte Register | *STB? | - |
| Service Request Enable Register | *SRE? | *SRE |
| Standard Event Status Register | *ESR? | - |
| Standard Event Status Enable Register | *ESE? | *ESE |
| Event Status Register 0 | :ESR0? | - |
| Event Status Enable Register 0 | :ESE0? | :ESE0 |
| Event Status Register 1 | :ESR1? | - |
| Event Status Enable Register 1 | :ESE1? | :ESE1 |
| Event Status Register 2 | :ESR2? | - |
| Event Status Enable Register 2 | :ESE2? | :ESE2 |
| Event Status Register 3 | :ESR3? | - |
| Event Status Enable Register 3 | :ESE3? | :ESE3 |

## GP-IB Commands

The following commands can be used through interface functions.

| Command | Description | Changes the instrument from the Remote state to the Local <br> state. |
| :--- | :--- | :--- |
| GTL | Go To Local | Locks all keys on the instrument, including the Local Key. |
| LLO | Local Lock Out | Clears the input buffer and output queue. |
| DCL | Device CLear | Selected Device Clear | Clears the input buffer and output queue..

Initialization Items

| Item Initialization Method | At <br> Power-on | System <br> Reset | *RST <br> Command | Device Clear (GP-IB only) | *CLS <br> Command | Factory Default |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| GP-IB address | - | - | - | - | - | 1 |
| RS-232C setting (baud rate) | - | - | - | - | - | 38400 |
| LAN setting | - | - | - | - | - | *4 |
| Device-specific functions (range, etc.) | - | $\bullet$ | $\bullet$ | - | - | *4 |
| Output Queue | $\bullet$ | $\bullet$ | - | $\bullet$ | - | $\bullet$ |
| Input Buffer | $\bullet$ | $\bullet$ | - | $\bullet$ | - | - |
| Status Byte Register | $\bullet$ | - | - | -*1 | -*2 | - |
| Event registers | $\bullet * 3$ | $\bullet$ | - | - | - | - |
| Enable register | - | - | - | - | - | 0 |
| Current path | $\bullet$ | $\bullet$ | - | $\bullet$ | - | $\bullet$ |
| Headers on/off | $\bullet$ | $\bullet$ | $\bullet$ | - | - | ON |
| Output items | $\bullet$ | $\bullet$ | $\bullet$ |  |  | *5, |
| Response message terminator | - | $\bullet$ | - | - | - | CR+LF |
| Response message separator | - | - | - | - | - | ; |

*1. Only the MAV bit (bit 4) is cleared.
*2. All bits except the MAV bit are cleared.
*3. Except the PON bit (bit 7).
*4. Refer to the user's manual for the instrument.
*5. See below.
Output Item Initialization

| ch <br> Measurement Item | CH1 | CH2 | $\begin{gathered} \text { CH3 } \\ \text { (PW3337 only) } \end{gathered}$ | sum |
| :---: | :---: | :---: | :---: | :---: |
| :MEASure? |  |  |  |  |
| Voltage (U) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Current (I) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Active power (P) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Apparent power (S) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Reactive power (Q) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Power factor (PF) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Phase angle (DEG) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Voltage frequency (FREQU) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |  |
| Current frequency (FREQI) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |  |
|  |  |  |  |  |
| :MEASure:HARMonic? |  |  |  |  |
| Harmonic wave voltage effective value (HU) | $\qquad$ <br> - (first-order only) | - (first-order only) | $\begin{gathered} \hline \text { (first-order } \\ \text { only) } \\ \hline \end{gathered}$ | $\begin{gathered} \hline \text { (first-order } \\ \text { only) } \\ \hline \end{gathered}$ |
| Harmonic wave current effective value (HU) | $\qquad$ | $\begin{gathered} \hline \text { (first-order } \\ \text { only) } \\ \hline \end{gathered}$ | $\begin{gathered} \hline \text { (first-order } \\ \text { only) } \\ \hline \end{gathered}$ | $\begin{gathered} \hline \text { (first-order } \\ \text { only) } \\ \hline \end{gathered}$ |
| Harmonic wave power effective value (HU) | $\qquad$ | $\begin{gathered} \hline \circ \text { (first-order } \\ \text { only) } \\ \hline \end{gathered}$ | $\begin{gathered} \hline \text { (first-order } \\ \text { only) } \\ \hline \end{gathered}$ | $\begin{gathered} \hline \text { (first-order } \\ \text { only) } \\ \hline \end{gathered}$ |
|  |  |  |  |  |

Output for all items other than those listed above is OFF by default.

## Command Execution Time

Command execution time indicates the time for analyzing and processing long form commands.
However, the command execution time for commands with data is the time described according to the data format specified in the <data portion>, and for query commands it is the time when the header is ON.

- The instrument performs measurements, calculations, and updates the display repeatedly in 200 ms cycles. Measurements and calculations are given priority over command processing, and require a maximum of 150 ms . Therefore, a maximum delay of 150 ms may be encountered from the time a command is received until analysis begins.

(200 ms) Display update rate: 5 times per second
- Updating the display may be delayed if the analysis processing is not completed in time, even if the internal processing time is met.
- All commands are sequential.
- When communicating with a controller, the time required to transfer the data must be added.

The amount of time required for the data transfer depends on the controller (communications).
The RS-232C transfer time for a starting bit, data length of 8, no parity bit, and a stop bit (10 bits total) with a baud rate setting of N bps is calculated as follows:

Transfer Time T [1 character/second] = Baud Rate N [bps] / 10 [bits]
The measurement value is 11 characters so the time required to transfer one piece of data would be 11/T.
(Example) 9600 bps: $11 /(9600 / 10)=11 \mathrm{~ms}$ (approximately)

- Wait a few moments after making any changes via setting commands to allow the measurements to stabilize.

| Command | Execution time (excluding communication time and delays to the start of analysis) |
| :--- | :--- |
| *WAI | 200 ms or less |
| The other <br> commands | 10 ms or less |

## Errors During Communications

An error occurs when messages are executed in the following cases:

- Command Error

When message syntax (spelling) is invalid
When the data format in a command or query is invalid

- Query Error

When the response message exceeds 4,000 bytes
When there is a query after an *IDN? query

- Execution Error

When invalid character or numeric data is present

- Device-dependent Error

When an error occurs during self-testing
When a restricted operation (such as changing the range) is attempted during an integration operation (when the INTEGRATOR indicator is lit or flashing)
When a restricted operation (such as changing the range) is attempted during the Hold state
When the *TRG command is executed in any state other than the Hold state

[^0]
## 2 Message List

The information in angled brackets < > represents the data format.
When the GP-IB interface is used, you can send an SRQ interrupt to the controller by setting the Event Status Register and *SRE.

Standard Commands

| Message | Data Formats (Response data for queries) | Description | Reference Page |
| :---: | :---: | :---: | :---: |
| *CLS |  | Clears the event registers and the Status Byte Register. | 36 |
| *ESE <br> *ESE? | 0 to 255 | Sets/Queries the Standard Event Status Enable Register. | 36 |
| *ESR? | 0 to 255 | Queries the Standard Event Status Register. | 36 |
| *IDN? | <Manufacturer name>, <br> <Model name>, <br> <Model type>, <br> <Software version> <br> <Serial number> | Queries the Device ID. | 34 |
| *OPC |  | Sets bit 0 of the Standard Event Status Register to 1 after an operation completes. | 35 |
| *OPC? | 1 | Queries execution completion. | 35 |
| *OPT? |  | Queries the device options. | 34 |
| *RST | - | Initializes the device. | 34 |
| *SRE *SRE? | 0 to 127 | Sets/Queries the Service Request Enable Register. | 37 |
| *STB? | 0 to 127 | Queries the Status Byte Register. | 37 |
| *TRG |  | Updates the display once. | 37 |
| *TST? | 0 to 4 | Initiates a self-test and queries the result. | 35 |
| *WAI | $\underline{ }$ | Waits until the next display update completes. | 35 |

Device-specific Commands (Event Registers)

| Message | Data Formats (Response data for queries) | Description | Reference Page |
| :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { :ESEO } \\ & \text { :ESE0? } \end{aligned}$ | 0 to 255 | Sets/Queries Event Status Enable Register 0. | 38 |
| :ESRO? | (0 to 255) | Queries Event Status Register 0. | 39 |
| :ESE1 <br> :ESE1? | 0 to 255 | Sets/Queries Event Status Enable Register 1. | 38 |
| :ESR1? | (0 to 255) | Queries Event Status Register 1. | 39 |
| $\begin{aligned} & \text { :ESE2 } \\ & \text { :ESE2? } \end{aligned}$ | 0 to 255 | Sets/Queries Event Status Enable Register 2. | 39 |
| :ESR2? | (0 to 255) | Queries Event Status Register 2. | 39 |
| $\begin{aligned} & \text { :ESE3 } \\ & \text { :ESE3? } \end{aligned}$ | 0 to 255 | Sets/Queries Event Status Enable Register 3. | 39 |
| :ESR3? | (0 to 255) | Queries Event Status Register 3. | 39 |

## Device-specific Commands (Measurement Settings)

| Message | Data Formats (Response data for queries) | Description | $\begin{gathered} \hline \text { Reference } \\ \text { Page } \\ \hline \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| :WIRing :Wiring? :MODE :MODE? | TYPE1 to TYPE7 <br> 1/2 (for 3331 interchangeability) | Sets/Queries the wire connection setting. | 40 40 |
| :AVERaging :AVERaging? | 1/2/5/10/25/50/100 | Sets/Queries the number of times to perform averaging. | 41 |
| :INTEGrate? |  | Queries the integration set time and the integration state. | 42 |
| :INTEGrate:STATe :INTEGrate:STATe? | START/STOP/RESET | Sets/Queries the integration state. | 42 |
| :INTEGrate:TIME :INTEGrate:TIME? | <Hour(NR1)>, <Minutes(NR1)> | Sets/Queries the integration time. | 43 |
| :HARMonic:ORDer:UPPer :HARMonic:ORDer:UPPer? | <Order (2 to 50)> | Sets/Queries the upper limit order for harmonic wave analysis. | 43 |
| :HOLD :HOLD? | OFF/ON/MAX/MIN/RESET | Sets/Queries the holds or releases the display value. | 43 |
| :DEMAg |  | Performs a zero adjustment. |  |
| :DEMAg? | <Zero adjustment execution state> | Queries the zero adjustment execution state. | 44 |
| :SYNC:CONTrol :SYNC:CONTrol? | <Synchronization control setting> | Sets/Queries the synchronization control function. | 44 |

Device-specific Commands (Voltage Range)

| Message | Data Formats (Response data for queries) | Description | Reference Page |
| :---: | :---: | :---: | :---: |
| All Channels (queries are for the representative value [ch1] only) |  |  |  |
| :VOLTage? | (<AUTO>, <Voltage Range>) | Queries the voltage range setting item (ch1 only). | 44 |
| :VOLTage:AUTO :VOLTage:AUTO? | ON/OFF | Sets (all channels) or queries (ch1 only) the voltage automatic range. | 45 |
| :VOLTage:RANGe :VOLTage:RANGe? | <Voltage Range (NR1)> | Sets (all channels) or queries (ch1 only) the voltage range. | 45 |
| ch1 |  |  |  |
| :VOLTage1? | (<AUTO>, <Voltage Range>) | Queries the voltage range setting item (ch1). | 44 |
| :VOLTage1:AUTO <br> :VOLTage1:AUTO? | ON/OFF | Sets (ch1) or queries (ch1) the voltage automatic range. | 45 |
| :VOLTage1:RANGe :VOLTage1:RANGe? | <Voltage Range (NR1)> | Sets (ch1) or queries (ch1) the voltage range. | 45 |
| ch2 |  |  |  |
| :VOLTage2? | (<AUTO>, <Voltage Range>) | Queries the voltage range setting item (ch2). | 44 |
| :VOLTage2:AUTO :VOLTage2:AUTO? | ON/OFF | Sets (ch2) or queries (ch2) the voltage automatic range. | 45 |
| :VOLTage2:RANGe :VOLTage2:RANGe? | <Voltage Range (NR1)> | Sets (ch2) or queries (ch2) the voltage range. | 45 |
| ch3 |  |  |  |
| :VOLTage3? | (<AUTO>, <Voltage Range>) | Queries the voltage range setting item (ch3). | 44 |
| :VOLTage3:AUTO :VOLTage3:AUTO? | ON/OFF | Sets (ch3) or queries (ch3) the voltage automatic range. | 45 |
| :VOLTage3:RANGe :VOLTage3:RANGe? | <Voltage Range (NR1)> | Sets (ch3) or queries (ch3) the voltage range. | 45 |

## Device-specific Commands (Current Range)

| Message | Data Formats <br> (Response data for queries) | Description | Reference Page |
| :---: | :---: | :---: | :---: |
| All Channels (queries are for the representative value [ch1] only) |  |  |  |
| :CURRent? | (<AUTO>, <Current Range>, ...) | Queries the current range setting item (ch1 only). | 46 |
| :CURRent:AUTO :CURRent:AUTO? | ON/OFF | Sets (all channels) or queries (ch1 only) the current automatic range. | 46 |
| :CURRent:RANGe :CURRent:RANGe? | <Current Range (NR1)> | Sets (all channels) or queries (ch1 only) the current range. | 47 |
| :CURRent:EXTRange :CURRent:EXTRange? | <Clamp Current Range> | Sets (all channels) or queries (ch1 only) the current range (current sensor). | 48 |
| :CURRent:TYPe :CURRent:TYPe? | <Current Sensor Type> | Sets (all channels) or queries (ch1 only) the current sensor type. | 47 |

| ch1 |  |  |  |
| :---: | :---: | :---: | :---: |
| :CURRent1? | (<AUTO>, <Current Range>, ...) | Queries the current range setting item (ch1). | 46 |
| :CURRent1:AUTO :CURRent1:AUTO? | ON/OFF | Sets (ch1) or queries (ch1) the current automatic range. | 46 |
| :CURRent1:RANGe :CURRent1:RANGe? | <Current Range (NR1)> | Sets (ch1) or queries (ch1) the current range. | 47 |
| :CURRent1:EXTRange :CURRent1:EXTRange? | <Clamp Current Range> | Sets (ch1) or queries (ch1) the current range (current sensor). | 48 |
| :CURRent1:TYPe :CURRent1:TYPe? | <Current Sensor Type> | Sets (ch1) or queries (ch1) the current sensor type. | 47 |

| ch2 |  |  |  |
| :---: | :---: | :---: | :---: |
| :CURRent2? | (<AUTO>, <Current Range>, ...) | Queries the current range setting item (ch2). | 46 |
| :CURRent2:AUTO :CURRent2:AUTO? | ON/OFF | Sets (ch2) or queries (ch2) the current automatic range. | 46 |
| :CURRent2:RANGe :CURRent2:RANGe? | <Current Range (NR1)> | Sets (ch2) or queries (ch2) the current range. | 47 |
| :CURRent2:EXTRange :CURRent2:EXTRange? | <Clamp Current Range> | Sets (ch2) or queries (ch2) the current range (current sensor) | 48 |
| :CURRent2:TYPe :CURRent2:TYPe? | <Current Sensor Type> | Sets (ch2) or queries (ch2) the current sensor type. | 47 |
| ch3 |  |  |  |
| :CURRent3? | (<AUTO>, <Current Range>, ...) | Queries the current range setting item (ch3). | 46 |
| :CURRent3:AUTO :CURRent3:AUTO? | ON/OFF | Sets (ch3) or queries (ch3) the current automatic range. | 46 |
| :CURRent3:RANGe :CURRent3:RANGe? | <Current Range (NR1)> | Sets (ch3) or queries (ch3) the current range. | 47 |
| :CURRent3:EXTRange :CURRent3:EXTRange? | <Clamp Current Range> | Sets (ch3) or queries (ch3) the current range (current sensor). | 48 |
| :CURRent3:TYPe :CURRent3:TYPe? | <Current Sensor Type> | Sets (ch3) or queries (ch3) the current sensor type. | 47 |

## Device-specific Commands (Frequency Range [Zero-crossing Filter])

The frequency range and zero-crossing filter settings are linked.

| Message | $\begin{array}{c}\text { Data Formats } \\ \text { (Response data for queries) }\end{array}$ | Description |
| :--- | :--- | :--- | \(\left.\begin{array}{c}Reference <br>

Page\end{array}\right]\)

| ch1 |  | Queries (ch1) the frequency range | 49 |  |
| :--- | :--- | :--- | :--- | :--- |
| :FREQuency1? | <Frequency Range (NR1)> | Quero-crossing filter). <br> (zers | Sets (ch1) or queries (ch1) the frequency range <br> (zero-crossing filter). | 49 |
| :FREQuency1:RANGe | <Frequency Range (NR1)> |  |  |  |
| :FREQuency1:RANGe? |  |  |  |  |

| ch2 |  |  |  |
| :---: | :---: | :---: | :---: |
| :FREQuency2? | <Frequency Range (NR1)> | Queries (ch2) the frequency range (zero-crossing filter). | 49 |
| :FREQuency2:RANGe :FREQuency2:RANGe? | <Frequency Range (NR1)> | Sets (ch2) or queries (ch2) the frequency range (zero-crossing filter). | 49 |
| ch3 |  |  |  |
| :FREQuency3? | <Frequency Range (NR1)> | Queries (ch3) the frequency range (zero-crossing filter). | 49 |
| :FREQuency3:RANGe :FREQuency3:RANGe? | <Frequency Range (NR1)> | Sets (ch3) or queries (ch3) the frequency range (zero-crossing filter). | 49 |

## Device-specific Commands (Synchronization Source)

| Message | $\begin{array}{c}\text { Data Formats } \\ \text { (Response data for queries) }\end{array}$ | Description |
| :--- | :--- | :--- | \(\left.\begin{array}{c}Reference <br>

Page\end{array}\right]\)

| ch1 |  |  |  |
| :---: | :---: | :---: | :---: |
| :SOURce1 :SOURce1? | <Synchronization Source> | Sets (ch1) or queries (ch1) the synchronization source. | 50 |
| :SOURce1:TIMEOut :SOURce1:TIMEOut? | 0.1/1/10 | Sets (ch1) or queries (ch1) the synchronization timeout. | 50 |
| ch2 |  |  |  |
| :SOURce2 :SOURce2? | <Synchronization Source> | Sets (ch2) or queries (ch2) the synchronization source. | 50 |
| :SOURce2:TIMEOut :SOURce2:TIMEOut? | 0.1/1/10 | Sets (ch2) or queries (ch2) the synchronization timeout. | 50 |
| ch3 |  |  |  |
| :SOURce3 :SOURce3? | <Synchronization Source> | Sets (ch3) or queries (ch3) the synchronization source. | 50 |
| :SOURce3:TIMEOut :SOURce3:TIMEOut? | 0.1/1/10 | Sets (ch3) or queries (ch3) the synchronization timeout. | 50 |

## Device-specific Commands (VT/CT Ratio)

| Message | Data Formats <br> (Response data for queries) | Description | Reference Page |
| :---: | :---: | :---: | :---: |
| All Channels (queries are for the representative value [ch1] only) |  |  |  |
| :SCALe? | (<VT Ratio>, <CT Ratio>) | Queries (ch1 only) the VT and CT ratios. | 51 |
| $\begin{aligned} & \text { :SCALe:VT } \\ & \text { :SCALe:VT? } \end{aligned}$ | <VT Ratio (NRf)> | Sets (all channels) or queries (ch1 only) the VT ratio. | 51 |
| $\begin{aligned} & \text { :SCALe:CT } \\ & \text { :SCALe:CT? } \end{aligned}$ | <CT Ratio (NRf)> | Sets (all channels) or queries (ch1 only) the CT ratio. | 52 |
| ch1 |  |  |  |
| :SCALe1? | (<VT Ratio>, <CT Ratio>) | Queries (ch1) the VT and CT ratios. | 51 |
| $\begin{aligned} & \text { :SCALe1:VT } \\ & \text { :SCALe1:VT? } \end{aligned}$ | <VT Ratio (NRf)> | Sets (ch1) or queries (ch1) the VT ratio. | 51 |
| :SCALe1:CT :SCALe1:CT? | <CT Ratio (NRf)> | Sets (ch1) or queries (ch1) the CT ratio. | 52 |
| ch2 |  |  |  |
| :SCALe2? | (<VT Ratio>, <CT Ratio>) | Queries (ch2) the VT and CT ratios. | 51 |
| $\begin{aligned} & \text { :SCALe2:VT } \\ & \text { :SCALe2:VT? } \end{aligned}$ | <VT Ratio (NRf)> | Sets (ch2) or queries (ch2) the VT ratio. | 51 |
| $\begin{aligned} & \text { :SCALe2:CT } \\ & \text { :SCALe2:CT? } \end{aligned}$ | <CT Ratio (NRf)> | Sets (ch2) or queries (ch2) the CT ratio. | 52 |
| ch3 |  |  |  |
| :SCALe3? | (<VT Ratio>, <CT Ratio>) | Queries (ch3) the VT and CT ratios. | 51 |
| $\begin{aligned} & \text { :SCALe3:VT } \\ & \text { :SCALe3:VT? } \end{aligned}$ | <VT Ratio (NRf)> | Sets (ch3) or queries (ch3) the VT ratio. | 51 |
| $\begin{aligned} & \text { :SCALe3:CT } \\ & \text { :SCALe3:CT? } \end{aligned}$ | <CT Ratio (NRf)> | Sets (ch3) or queries (ch3) the CT ratio. | 52 |

Device-specific Commands (D/A Output)

|  | Data Formats <br> Message |  |  |
| :--- | :--- | :--- | :--- |

## Device-specific Commands (Instrument Display Settings)

| Message ([]: Can be omitted) | Data Formats (Response data for queries) | Description | $\begin{gathered} \text { Reference } \\ \text { Page } \\ \hline \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| :DISPlay[:NORMal] :DISPlay[:NORMal]? | (<Display a>, <Display b>, <Display c>, <Display d>) | Sets/Queries instrument display items (a) through (d). | 55 |
| :DISPlay:NORMal:A :DISPlay:NORMaI:A? | <Display a> | Sets/Queries instrument display item (a). | 55 |
| :DISPlay:NORMaI:B :DISPlay:NORMaI:B? | <Display b> | Sets/Queries instrument display item (b). | 55 |
| :DISPlay:NORMaI:C :DISPlay:NORMaI:C? | <Display C> | Sets/Queries instrument display item (c). | 55 |
| :DISPlay:NORMaI:D :DISPlay:NORMaI:D? | <Display d> | Sets/Queries instrument display item (d). | 55 |
| :DISPlay:MODE :DISPlay:MODE? | <Display Specification> | Sets/Queries the instrument display mode (normal/harmonic wave). | 58 |
| :DISPlay:HARMonic:ORDer :DISPlay:HARMonic:ORDer? | <Harmonic Wave Order 0 to 50> | Sets/Queries the display order for harmonic wave order common display. | 58 |
| :DISPlay:HARMonic:B:ITEM :DISPlay:HARMonic:B:ITEM? | <Harmonic Wave Display Item> | Sets/Queries the display item (b) for harmonic wave order common display. | 58 |
| :DISPlay:HARMonic:C:ITEM :DISPlay:HARMonic:C:ITEM? | <Harmonic Wave Display Item> | Sets/Queries the display item (c) for harmonic wave order common display. | 58 |
| :DISPlay:HARMonic:D:ITEM :DISPlay:HARMonic:D:ITEM? | <Harmonic Wave Display Item> | Sets/Queries the display item (d) for harmonic wave order common display. | 58 |
| :DISPlay:HORDerSel:A:ORDer :DISPlay:HORDerSel:A:ORDer? | <Harmonic Wave Order 0 to 50> | Display order (a) for harmonic wave order individual display. | 59 |
| :DISPlay:HORDerSel:A:ITEM :DISPlay:HORDerSel:A:ITEM? | <Harmonic Wave Display Item> | Display item (a) for harmonic wave order individual display. | 59 |
| :DISPlay:HORDerSel:B:ORDer :DISPlay:HORDerSel:B:ORDer? | <Harmonic Wave Order 0 to 50> | Display order (b) for harmonic wave order individual display. | 59 |
| :DISPlay:HORDerSel:B:ITEM :DISPlay:HORDerSel:B:ITEM? | <Harmonic Wave Display Item> | Display item (b) for harmonic wave order individual display. | 59 |
| :DISPlay:HORDerSel:C:ORDer :DISPlay:HORDerSel:C:ORDer? | <Harmonic Wave Order 0 to 50> | Display order (c) for harmonic wave order individual display. | 59 |
| :DISPlay:HORDerSel:C:ITEM :DISPlay:HORDerSel:C:ITEM? | <Harmonic Wave Display Item> | Display item (c) for harmonic wave order individual display. | 59 |
| :DISPlay:HORDerSel:D:ORDer :DISPlay:HORDerSel:D:ORDer? | <Harmonic Wave Order 0 to 50> | Display order (d) for harmonic wave order individual display. | 59 |
| :DISPlay:HORDerSel:D:ITEM :DISPlay:HORDerSel:D:ITEM? | <Harmonic Wave Display Item> | Display item (d) for harmonic wave order individual display. | 59 |

## Device-specific Commands (Measurement Value Output)

Note: :MEASure[:NORMAL]:ITEM:U:CH1(?) $\rightarrow$ Setting Command:MEASure[:NORMAL]:ITEM:U:CH1 Query
:MEASure[:NORMAL]:ITEM:U:CH1?

| Message ([]: Can be omitted) | Data Formats (Response data for queries) | Description | $\begin{gathered} \text { Reference } \\ \text { Page } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| :MEASure[:POWer]? <br> :MEASure[:NORMal]:VALue? | <Measurement Item 1> ... Maximum 180 | Queries measurement data. | 60 |
| :MEASure:ITEM:ALLClear |  | Turns OFF all output items (including harmonic wave). | 65 |
| :MEASure[:NORMal]:ITEM? |  | Queries output items. | 65 |
| :DATAout:ITEM(?) | (<Output Item 1>, <Output Item 2>, <Output Item 3>, <Output Item 4>, <Output Item 5>, <Output Item 6>) | ":MEASure?" query output specification (3331-compatible) | 66 |

":MEASure:HARMonic?"query. Sets/Queries output items.
Sets/Queries the output order
of ":MEASure:HARMonic?"
queries.
":MEASure:HARMonic?" query Sets/Querys the measurement status output93
":MEASure:HARMonic?"
Sets/Queries the output of the harmonic wave voltage effective value output for the above query.
":MEASure:HARMonic?"
Sets/Queries the output of the harmonic wave voltage effective value (maximum value) output for the above query.
":MEASure:HARMonic?"
Sets/Queries the output of the harmonic wave voltage effective value (minimum value) output for the above query.
":MEASure:HARMonic?"
Sets/Queries the output of the harmonic wave current effective value output for the above query.
":MEASure:HARMonic?"
Sets/Queries the output of the harmonic wave current effective value (maximum value) output for the above query.

## Device-specific Commands (Communications)

| Message ([]: Can be omitted) | Data Formats <br> (Response data for queries) | Description | Reference Page |
| :---: | :---: | :---: | :---: |
| :RS232c? |  | Queries the RS232-C setting items. | 103 |
| :RS232c:BAUD :RS232c:BAUD? | <RS Baud Rate> | Sets/Queries the RS232-C baud rate. | 103 |
| :RS232c:ANSWer :RS232c:ANSWer? | ON/OFF | Sets/Queries the execution confirmation message. | 104 |
| :RS232c:ERRor? |  | Sets/Queries RS232-C communications errors. | 104 |
| :IP:ADDRess <br> :IP:ADDRess? | (<Address 1 (NR1)>, <Address 2 (NR1)>, <Address 3 (NR1)>, <Address 4 (NR1)>) | Sets/Queries the LAN IP address. | 105 |
| :IP:DEFaultgateway <br> :IP:DEFaultgateway? | (<Address 1 (NR1)>, <br> <Address 2 (NR1)>, <br> <Address 3 (NR1)>, <br> <Address 4 (NR1)>) | Sets/Queries the LAN default gateway. | 105 |
| :IP:SUBNetmask <br> :IP:SUBNetmask? | (<Address 1 (NR1)>, <br> <Address 2 (NR1)>, <br> <Address 3 (NR1)>, <br> <Address 4 (NR1)>) | Sets/Queries the LAN subnet mask. | 105 |
| :GPIB? |  | Queries the GP-IB setting items. | 106 |
| :GPIB:ADDRess :GPIB:ADDRess? | <Address (NR1)> | Sets/Queries the GP-IB address. | 106 |
| :HEADer :HEADer? | ON/OFF | Sets/Queries the header. | 106 |
| $\begin{aligned} & \text { :LOCAL } \\ & \text { :LOCAL? } \end{aligned}$ | 0/1 (NR1) | Changes to the Local (manual operation) state. <br> Queries the Local/Remote state. | 106 |
| :TRANsmit:SEParator :TRANsmit:SEParator? | 0/1 (NR1) | Sets/Queries the message unit separator. | 107 |
| :TRANsmit:TERMinator :TRANsmit:TERMinator? | 0/1 (NR1) | Sets/Queries the message unit terminator. | 107 |

## 3 Message Reference

## Message Reference Interpretation

## Standard Commands

## (1) System Data Command

## Query Device ID (Identification Code)

| Syntax | Query | *IDN? |
| :--- | :--- | :--- |
|  | Response | <Manufacturer name>, <Model name>, <Model type>, <Software version>, <br> <Serial number> |

```
Query Device Options
    Syntax Query
        *OPT?
        Response <IF type>, <D/A output capability>
\begin{tabular}{ll} 
<IF type> & GPIB/NONE \\
\(<\) D/A output capability> & DA_OUT/NONE
\end{tabular}
Description Queries the options available on the instrument.
Example Query *OPT?
Response GPIB,DA_OUT
The instrument uses the GP-IB interface and is capable of D/A output.
Note - The response message has no header.
```

## (2) Internal Operation Command

## Initialize Device

Syntax Command *RST
Description Command Resets the instrument to its initial state.
Note - Refer to the user's manual for the instrument (in the System Reset section) for information about the initial settings.

- The communications state is not initialized.
- This command can be executed even when a system error has occurred.

## Execute Self-test and Query Result

| Syntax | Query | *TST? |
| :---: | :---: | :---: |
|  | Response | $<0 \sim 4$ |
|  |  | 0:N |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
| Description | Perform th <br> Returns z | e instrume ro when no |
| Example | Query | *TST? |
|  | Response | 2 |
|  |  | A RAM e |
|  |  | The instru Stop use |
| Note | - The res | onse mes |
|  | - A devic (when the (when th | -dependen <br> INTEGRA <br> HOLD ind |
|  | - This co | mand can |

## (3) Synchronization Commands

## Set OPC Bit of SESR when Finished with All Pending Operations

Syntax Command *OPC

```
Description Sets OPC bit 0 of the Standard Event Status Register (SESR) when all commands prior
                to *OPC have finished processing.
Example :MEAS?;*OPC
            Sets the OPC bit of the SESR after the :MEAS? query finishes processing.
```

## Respond with ASCII "1" when Finished with All Pending Operations

Syntax Query *OPC?

Response
1
Description Responds with ASCII "1" when all commands prior to *OPC have finished processing. Example :MEAS?;*OPC?
" 1 " is stored in the output queue after the data for the :MEAS? query is generated. Response (When HEADER ON) *OPC 1
(When HEADER OFF
1

## Note

## Wait until display update finishes before executing the next command.

Syntax Command *WAI

Description No commands after *WAI are run until the next display update completes.
(200ms max)
Example :MEAS?;*WAI;:MEAS?
Data is loaded after each display update.
Note - The displayed data will not be updated even if this command is executed, while the display is held, the maximum/minimum values are being held, and the averaged values are displayed.

- The display data will not be updated even during a range switch ("-----" display) even if this command is executed.

## (4) Status and Event Control Commands

## Clear Event Register, Status Byte Register (Except Output Queue)

Syntax Command
*CLS

| Description | Clears the event status registers. The Status <br> event status registers are also cleared. <br> (SESR, ESR0, ESR1, ESR2, ESR3, |
| ---: | :--- |
| NoteRS232c:ERRor) <br> - The output queue, enable registers, and bit 4 of the status byte register (MAV) are not <br> affected. |  |
|  | - This command can be executed even when a system error has occurred. |

## Read/Write the Standard Event Status Enable Register (SESER)

| Syntax | Command <br> Query <br> Response | *ESE <0~255(NR1)> <br> *ESE? <br> <0~255(NR1)> |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Description | Command | The SESER mask is set to the numerical value 0 to 255 . The initial value (at power-on) is 0 . <br> Although NRf numerical values are accepted, values to decimal are rounded to the nearest integer. URQ (bit 6 ) and RQC (bit 1 ) is not used by the instrument. events will not be triggered even if a value of 1 is specified. The contents of the SESER, as set by the *ESE command, an NR1 value ( 0 to 255). |  |  |  |  |  |  |  |
|  |  | $\begin{aligned} & 128 \\ & \text { bit } 7 \end{aligned}$ | $\begin{gathered} 64 \\ \text { bit } 6 \end{gathered}$ | $\begin{gathered} 32 \\ \text { bit } 5 \end{gathered}$ | $\begin{gathered} 16 \\ \text { bit } 4 \end{gathered}$ | $\begin{gathered} 8 \\ \text { bit } 3 \end{gathered}$ | $\begin{gathered} 4 \\ \text { bit } 2 \end{gathered}$ | $\begin{gathered} 2 \\ \text { bit } 1 \end{gathered}$ | $\begin{gathered} 1 \\ \text { bit } 0 \end{gathered}$ |
|  |  | PON | URQ | CME | EXE | DDE | QYE | RQC | OPC |
| Example | Command | *ESE 36 |  |  |  |  |  |  |  |
|  | Query | (Sets bits 5 and 2 of SESER) *ESE? |  |  |  |  |  |  |  |
|  | Response | (When HEADER ON) *ESE 36 |  |  |  |  |  |  |  |
|  |  |  |  |  | $36$ |  |  |  |  |

## Read and Clear Standard Event Status Register (SESR)

Syntax Query
Response <0~255
$<0 \sim 255$ (NR1)>

Description Returns the contents of the SESR as an NR1 value from 0 to 255 , then clears register contents.
The response message has no header.

| 128 | 64 | 32 |  | 16 | 8 | 4 | 2 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  |  |  |
| bit 7 | bit 6 | bit 5 | bit 4 | bit 3 | bit 2 | bit 1 | bit 0 |
| PON | URQ | CME | EXE | DDE | QYE | RQC | OPC |

Example *ESR?
32
Bit 5 of the SESR has been set to $1 . \rightarrow$ A CME (Command Error) has occurred.
Note - This command can be executed even when a system error has occurred.

## Write and Read Standard Event Status Enable Register (SRER)

| Syntax | Command <br> Query <br> Response | *SRE <0~255 (NR1)> *SRE? <br> <0~255 (NR1)> |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Description | Command Query | The SRER mask is set to the numerical value 0 to 255 . Although NRf numerical values are accepted, values to the right of the decimal are rounded to the nearest integer. Bit 6 and unused bits (bit 7 ) are ignored. The data is initialized to zero at power-on. The contents of the SRER, as set by the *SRE command, are returned as an NR1 value (0 to 255). Bit 6 and unused bits (bit 7 ) always return as zero. |  |  |  |  |  |  |
|  | $\begin{array}{r} 128 \\ \text { bit } 7 \\ \hline \end{array}$ |  | $\begin{gathered} 32 \\ \text { bit } 5 \end{gathered}$ | $\begin{gathered} 16 \\ \text { bit } 4 \end{gathered}$ | $\begin{gathered} 8 \\ \text { bit } 3 \end{gathered}$ | $\begin{gathered} 4 \\ \text { bit } 2 \end{gathered}$ | $\begin{gathered} 2 \\ \text { bit } 1 \end{gathered}$ | $\begin{gathered} 1 \\ \text { bit } 0 \end{gathered}$ |
|  | unused | 0 | ESB | MAV | ESB3 | ESB2 | ESB1 | ESBO |
| Example |  | *SRE 33 <br> Set SRER bits 0 and 5 to 1 . <br> *SRE? <br> (When HEADER ON) *SRE 33 <br> (When HEADER OFF) 33 |  |  |  |  |  |  |

## Read Status Byte and MSS Bit

Syntax Query *STB?
Response <0~127 (NR1)>
Description The contents of the STB are returned as an NR1 value (0 to 255). The response message has no header.

Note - The value of bit 6 is the value of the MSS bit.

- The MSS bit will not be cleared even if the service requests have been cleared through serial polling.
- This command can be executed even when a system error has occurred.

## Request a Sample

Syntax Command *TRG
Description Updates the measurement display once when the instrument is in the Hold state.
Example :HOLD ON;*TRG;:MEAS?
Note - A device-dependent error occurs if this command is executed in any other state than the Hold state.

- While the averaged value is displayed, the displayed averaged value is updated by executing this command.

## Device-specific Commands

## (1) Event Status Register

## Set and Query Device-specific Event Status Enable Register ESERO

## Set and Query Device-specific Event Status Enable Register ESER1

## Set and Query Device-specific Event Status Enable Register ESER2

## Set and Query Device-specific Event Status Enable Register ESER3

## Set and Query Device-specific Event Status Enable Registers ESER0 to ESER3

Syntax Query
:ESR0?
:ESR1?
:ESR2?
:ESR3?
Response <0~255 (NR1)>
Description Command Returns the contents of the Event Status Register in NR1 format.
Note - When ESRO? is executed, the content of ESRO is cleared.

- When ESR1? is executed, the content of ESR1 is cleared.
- When ESR2? is executed, the content of ESR2 is cleared.
- When ESR3? is executed, the content of ESR3 is cleared.

## (2) Measurement Settings

## Setting and Querying Wiring Settings

## Description <br> Example Command

## Query

Response (When HEADER ON) :WIRING TYPE1
(When HEADER OFF) TYPE1
Note - For all wiring types other than 1P2W, any items that can be set for each individual channel (such as the measurement range) are unified with the setting for CH 1 .

- You cannot change the wiring type during integration, while the display is held, or when
the maximum/minimum values are being held.

```
Setting and Querying Wiring Settings (3331-compatible)
```

## Setting and Querying Wiring Settings (3331-compatible)

Description
Example Command
Query
Response

Syntax Command
Query
Response
:MODE <Wiring type> :MODE?
<Wiring type>
This is the same as "WIRing". Sets or queries the wiring type.
The response returns the wiring type in the format of TYPE1 to TYPE7. :MODE 1
Sets the wiring type to 1P3W (TYPE2).
:MODE?
(When HEADER ON) :MODE TYPE2
(When HEADER OFF) TYPE2
Note - For all wiring types other than 1P2W, any items that can be set for each individual channel (such as the measurement range) are unified with the setting for CH 1 .

- You cannot change the wiring type during integration, while the display is held, or when the maximum/minimum values are being held.

Sets or queries the wiring type.
The response returns the wiring type in the format of TYPE1 to TYPE7.
:WIRING TYPE1
Sets the wiring type to TYPE1.
:WIR?

## Setting and Querying the Number of Times to Perform Averaging

Syntax Command :AVERaging <Number of times to perform averaging (NR1)>
Query
Response <Number of times to perform averaging (NR1)> 1/2/5/10/25/50/100

## Description

Example Command

## Query

Response

Sets or queries the number of times to perform averaging.
Although NRf numerical values are accepted, values to the right of the decimal are rounded to the nearest integer.

## :AVER 10

Set the number of times to perform averaging to 10.
:AVER?
(When HEADER ON) :AVERAGING 10
(When HEADER OFF) 10
Note - When the number of times to perform averaging is changed, averaging restarts.

- You cannot change this setting while the display is held or when the maximum/ minimum values are being held.

| Syntax | Query |
| ---: | :--- |
| Response | :INTEGrate? <br> <0000 to 9999 (NR1)>, $<00$ to 59 (NR1)>;<Integration status> <br> Returns the integration set time (hours, minutes) and the status of <br> integration calculations as a numerical value and string, respectively. <br> Sescription |
|  | See "INTEGrage:TIME?", "INTEGrage:STATe?" for details on the return |
| values. |  | separator from a semicolon ";" to a comma ",".

## Set and Query the Integration Status

| Syntax | Command | :INTEGrate:STATe <Integration status> |
| :---: | :---: | :---: |
|  | Query | :INTEGrate:STATe? |
|  | Response | <Integration status> |
|  |  | START/STOP/RESET |
| Description | Query | Indicates the integration operation. |
|  | Response | Returns the integration status as a string. |
| Example | Command | :INTEG:STAT START |
|  | Response | (When HEADER ON) : INTEGRATE:STATE START |
|  |  | (When HEADER OFF) START |

Note - Depending on the integration state, a device-dependent error may occur (see the table below).

- A device-dependent error will occur if the integration value reaches $\pm 999999 \mathrm{M}$ or if the integration time reaches 10,000 hours.

[^1]
## Set and Query the Integration Time

| Syntax | Command | :INTEGrate:TIME <0000 to 9999 (NR1)>,<00to 59 (NR1)> |
| :---: | :---: | :---: |
|  | Query | :INTEGrate:TIME? |
|  | Response | <0000 to 9999(NR1)>,<00 to 59(NR1)> |
| Description |  | Sets or queries the hours and minutes for the integration time. <br> The setting range is 1 minute to 9,999 hours and 59 minutes. The unit is 1 minute. |
|  |  | If the integration time is set to 0 hours and 0 minutes, integration is performed for 10,000 hours (approximately 417 days). |
|  |  | Although NRf numerical values are accepted, values to the right of the decimal are rounded to the nearest integer. |
| Example | Command | :INTEG:TIME 100,20 |
|  | Query | Sets the integration time to 100 hours and 20 minutes. :INTEG:TIME? |
|  | Response | (When HEADER ON) : INTEGRATE:TIME 0100,20 |
|  |  | (When HEADER OFF) 0100,20 |
| Note | - You c the ma | ot change this setting during integration, while the display is held, or when um/minimum values are being held. |

| Syntax | Command | :HARMonic:ORDer:UPPer <2 to 50 (NR1)> |
| :---: | :---: | :---: |
|  | Query | :HARMonic:ORDer:UPPer? |
|  | Response | <2 to 50 (NR1)> |
| Description |  | Sets or queries the upper limit for the harmonic wave analysis order. Although NRf numerical values are accepted, values to the right of the decimal are rounded to the nearest integer. |
| Example | Command | :HARM:ORD:UPP 50 |
|  | Query | Sets the upper limit for the harmonic wave analysis order to 50 . :HARM:ORD:UPP? |
|  | Response | (When HEADER ON) :HARMONIC:ORDER:UPPER 50 |
|  |  | (When HEADER OFF) 50 |
| Note | - You ca the max | not change this setting during integration, while the display is held, or when um/minimum values are being held. |

## Set and Query the Display Hold Status

| SyntaxCommand <br> Query <br> Response | :HOLD <ON/OFF/MAX/MIN/RESET> <br> :HOLD? <br> <ON/OFF/MAX/MIN/RESET> |  |
| :--- | :--- | :--- |
|  |  | ON Keeps the current display value (display hold state). |

## Execute and Query Zero Adjustment (Degaussing)

| Syntax | Command | :DEMAg |
| :---: | :---: | :---: |
|  | Query | :DEMAg? |
|  | Response | <OK/BUSY/ERROR> |
|  |  | OK Operation completed successfully. |
|  |  | BUSY Currently performing a zero adjustment (degauss). |
|  |  | ERROR Zero adjustment failed. |
| Description | Command | Performs a zero adjustment (degauss). |
|  | Query | Returns the zero adjustment (degauss) execution results or current status. |
| Example | Command | :DEMA |
|  | Query | :DEMA? |
|  | Response | (When HEADER ON) :DEMAG OK |
|  |  | (When HEADER OFF) OK |

Note - Some time is required to perform a zero adjustment (approximately 40 seconds). During this time, some commands may result in an execution error. Use this command in such a way that the next command is sent only after the zero adjustment (degaussing)is complete. For example, ":DEMAG;*WAI".

- If a zero adjustment (degauss) has not been performed since the instrument was powered on, :DEMAg? will return "OK".

| Syntax | Command | :SYNC:CONTrol <OFF/IN/OUT> |
| :---: | :---: | :---: |
|  | Query | :SYNC:CONTrol? |
|  | Response | <OFF/IN/OUT> |
|  |  | OFF Turns OFF the synchronization control function. |
|  |  | IN Sets the instrument as the slave device. |
|  |  | OUT Sets the instrument as the master device. |
| Description Example | Command | Sets or queries the I/O settings for multiple device synchronization control. |
|  | Command | :SYNC:CONT OUT |
|  | Query | :SYNC:CONT? |
|  | Response | (When HEADER ON) : SYNC:CONTROL OUT |
|  |  | (When HEADER OFF) OUT |

Note - Reset the integration value for both the master and slaves before starting synchronized measurement of integration.

## (3) Voltage Range

```
Query the Voltage Range and Auto Range
    Syntax Query ch1 :VOLTage?
    ch1 :VOLTage1?
    ch2 :VOLTage2?
    ch3 :VOLTage3?
    Response <Voltage range (NR1)>;<Auto range ON/OFF>
Description
    Example Query
    Response (When HEADER ON) :VOLTAGE1:RANGE 15;AUTO ON
    (When HEADER OFF) 15; ON
```

Note - You can use the :TRANsmit:SEParator command to change the message unit separator from a semicolon ";" to a comma ",".

```
Set and Query the Voltage Auto Range
```

Note - If you set the voltage range via a command such as :VOLTage:RANGe, the auto range operation will be turned OFF for the specified channel.

- You cannot change this setting during integration, while the display is held, or when the maximum/minimum values are being held.

```
Set and Query the Voltage Range Setting
Syntax
Command All Channels ch1 ch2 :VOLTage2:RANGe ch3 :VOLTage3:RANGe ch1 :VOLTage:RANGe? ch1 :VOLTage1:RANGe? ch2 :VOLTage2:RANGe? ch3 :VOLTage3:RANGe?
Response <Voltage range (NR1)>
<Voltage range (NR1)> = 15/30/60/150/300/600/1000
Description Command Sets the voltage range setting. (The unit is in volts [V].)
The numerical value is accepted in NRf format, but any data after the decimal point is rounded off.
Query Returns the voltage range setting in NR1 format.
Example Command
Query
(When HEADER ON) :VOLTAGE1:RANGE 15
(When HEADER OFF)
15
```

Note - Do not append a unit to the voltage range.

- After you change the range, wait a few moments until the internal circuitry stabilizes before you read any measurement values.
- If a negative value is specified, the absolute value will be used.
- If the number of times to perform averaging is set to any value other than 1 and the range is changed, averaging is restarted and the maximum and minimum values are reset.
- If any value other than <Voltage range (NR1)> is specified, the set value will be set to the range that can be measured.
However, if the specified value exceeds the full scale of the range, the next highest range will be set instead.
- If a range is specified, the auto range operation is turned OFF.
- You cannot change this setting during integration, while the display is held, or when the maximum/minimum values are being held.

## (4) Current Range

## Batch Query of Current Range Settings

## Query the Current Auto Range Setting

## Set and Query the Current Range Setting

Note - Do not append a unit to the current range.

- After you the change the range, wait a few moments until the internal circuitry stabilizes before you read any measurement values.
- If a range is specified, the auto range operation is turned OFF.
- If the number of times to perform averaging is set to any value other than 1 and the range is changed, averaging is restarted and the maximum and minimum values are reset.
- If any value other than <Current range (NR2)> is specified, the set value will be set to the range that can be measured.
However, if the specified value exceeds the full scale of the range, the next highest range will be set instead.
- If a negative value is specified, the absolute value will be used.
- You cannot change this setting during integration, while the display is held, or when the maximum/minimum values are being held.
- If you are using a current sensor, use the :CURRent:EXTRange(?) command.

## Set and Query External Current Sensor Input

## Set and Query the Current Range (When Using an External Current Sensor)

## (5) Frequency Range (Zero-crossing Filter)

```
Query the Frequency Range
    Syntax Query ch1 :FREQuency?
                                    ch1 :FREQuency1?
                                    ch2 :FREQuency2?
                                    ch3 :FREQuency3?
            Response <Frequency range (NR3)>
Description Queries the frequency range setting.
    Example Query :FREQuency1?
            Response (When HEADER ON) :FREQUENCY1:RANGE +500.0E+0
                (When HEADER OFF) +500.0E+0
Note The frequency range and zero-crossing filter settings are linked.
```

```
Set and Query the Frequency Range
```

Set and Query the Frequency Range
Syntax Command All Channels
Syntax Command All Channels
:FREQuency1:RANGe <Frequency range (NR3)>
:FREQuency1:RANGe <Frequency range (NR3)>
ch2 :FREQuency2:RANGe <Frequency range (NR3)>
ch2 :FREQuency2:RANGe <Frequency range (NR3)>
ch3 :FREQuency3:RANGe <Frequency range (NR3)>
ch3 :FREQuency3:RANGe <Frequency range (NR3)>
Query ch1 :FREQuency:RANGe?
Query ch1 :FREQuency:RANGe?
ch1 :FREQuency1:RANGe?
ch1 :FREQuency1:RANGe?
ch2 :FREQuency2:RANGe?
ch2 :FREQuency2:RANGe?
ch3 :FREQuency3:RANGe?
ch3 :FREQuency3:RANGe?
Response <Frequency range (NR3)>
Response <Frequency range (NR3)>
<Frequency range (NR3)> =
<Frequency range (NR3)> =
+100.0E+0,+500.0E+0,+200.0E+3,+5.0E+3
+100.0E+0,+500.0E+0,+200.0E+3,+5.0E+3
Description Command Sets the frequency range. (The unit used for frequency is hertz [Hz].)
Description Command Sets the frequency range. (The unit used for frequency is hertz [Hz].)
Although NRf numerical values are accepted, values to the right of six
Although NRf numerical values are accepted, values to the right of six
decimal places are rounded off.
decimal places are rounded off.
Query Returns the frequency range setting in NR3 format.
Query Returns the frequency range setting in NR3 format.
Example Command
Example Command
Query
Query
Response (When HEADER ON) :FREQUENCY1:RANGE +500.0E+0
Response (When HEADER ON) :FREQUENCY1:RANGE +500.0E+0
(When HEADER OFF) +500.0E+0

```
        (When HEADER OFF) +500.0E+0
```

Note - Do not append a unit to the frequency range.

- After you the change the range, wait a few moments until the internal circuitry stabilizes before you read any measurement values.
- The same setting is applied to all channels which are a part of a wiring type.
- If the number of times to perform averaging is set to any value other than 1 and the range is changed, averaging is restarted and the maximum and minimum values are reset.
- If any value other than <Frequency range (NR3)> is specified, the set value will be set to the range that can be measured.
However, if the specified value exceeds the full scale of the range, the next highest range will be set instead.
- An execution error will occur if any value that exceeds the maximum range ( 200 kHz ) or any negative value is specified.
- You cannot change this setting during integration, while the display is held, or when the maximum/minimum values are being held.

## (6) Synchronization Source

\section*{Set and Query the Synchronization Source <br> | Syntax | Command | All Channels | :SOURce | <Synchronization source> |
| :---: | :---: | :---: | :---: | :---: |
|  |  | ch1 | :SOURce1 | <Synchronization source> |
|  |  | ch2 | :SOURce2 | <Synchronization source> |
|  |  | ch3 | :SOURce3 | <Synchronization source> |
|  | Query | ch1 | :SOURce? |  |
|  |  | ch1 | :SOURce1? |  |
|  |  | ch2 | :SOURce2? |  |
|  |  | ch3 | :SOURce3? |  |
|  | Response | <Synch | ization source> |  |
|  |  | <Synch | nization source> | = U1/U2/U3/I1/I2/I3/DC |
| Description |  | Sets or | ries the synchron | nization source setting. |
| Example | Command | :SOUR |  |  |
|  | Query | :SOUR |  |  |
|  | Response | (When HE | ER ON) :SOUR | CE1 U1 |
|  |  | (When HE | ER OFF) U1 |  |

Note - After you change this setting, wait a few moments until the internal circuitry stabilizes before you read any measurement values.

- The same setting is applied to all channels which are a part of a wiring type.
- If the number of times to perform averaging is set to any value other than 1 and this setting is changed, averaging is restarted and the maximum and minimum values are reset.
- You cannot change this setting during integration, while the display is held, or when the maximum/minimum values are being held.

## Set and Query the Synchronization Timeout

## (7) VT Ratio/CT Ratio

## Query the VT Ratio and CT Ratio

| Syntax | Query | ch1 | :SCALe? |
| :---: | :--- | :--- | :--- |
|  |  | ch1 | :SCALe1? |
|  |  | ch2 | :SCALe2? |

## Set and Query the VT Ratio Setting

Syntax Command All Channels :SCALe:VT <VT ratio (NR2)>
ch1 :SCALe1:VT <VT ratio (NR2)>
ch2 :SCALe2:VT <VT ratio (NR2)>
ch3 :SCALe3:VT <VT ratio (NR2)>
Query ch1 :SCALe:VT?
ch1 :SCALe1:VT?
ch2 :SCALe2:VT?
ch3 :SCALe3:VT?
Response
<VT ratio (NR2)>
<VT ratio (NR2)> = 0.1 to 1000
Description Command
Sets the VT (PT) ratio.
Although NRf numerical values are accepted, values to the right of four decimal places are rounded off.
Query Returns the VT ratio setting in NR2 format.
Example Command
:SCAL1:VT 1.2
Query
Response
:SCAL1:VT?
(When HEADER ON) :SCALE1:VT 1.2
(When HEADER OFF) 1.2
Note - The same setting is applied to all channels which are a part of a wiring type.

- If the number of times to perform averaging is set to any value other than 1 and the range is changed, averaging is restarted and the maximum and minimum values are reset.
- You cannot change this setting during integration, while the display is held, or when the maximum/minimum values are being held.
- Instead of :SCALe:VT, you can also use :SCALe:PT. (Both of these commands perform the same operation.)

Set and Query the CT Ratio Setting

| Syntax | mmand | All Channels | :SCALe:CT | <CT ratio (NR2)> |
| :---: | :---: | :---: | :---: | :---: |
|  | Query | ch1 | :SCALe1:CT | <CT ratio (NR2)> |
|  |  | ch2 | :SCALe2:CT | <CT ratio (NR2)> |
|  |  | ch3 | :SCALe3:CT | <CT ratio (NR2)> |
|  |  | ch1 | :SCALe:CT? |  |
|  |  | ch1 | :SCALe1:CT? |  |
|  |  | ch2 | :SCALe2:CT? |  |
|  |  | ch3 | :SCALe3:CT? |  |
|  | Response | <CT ratio | NR2)> |  |
| Description | Command | <CT ratio Although decimal | (NR2)> $=0.001$ to T ratio. <br> Rf numerical values aces are rounded off | 1000 <br> are accepted, values to the right of four |
|  | Query | Returns | CT ratio setting in N | NR2 format. |
| Example | Command | :SCAL1 | CT 2.1 |  |
|  | Query | :SCAL1 |  |  |
|  | Response | (When HEA | RON) :SCALE1: | :CT 2.100 |
|  |  | (When HEA | ER OFF) 2.100 |  |
| Note | - The same setting is applied to all channels which are a part of a wiring type. <br> - If the number of times to perform averaging is set to any value other than 1 and the range is changed, averaging is restarted and the maximum and minimum values are reset. <br> - You cannot change this setting during integration, while the display is held, or when the maximum/minimum values are being held. |  |  |  |

## (8) D/A output

## Set and Query D/A Output (D/A1) Settings

Note You can use the AOUT:ITEM(?) command to query and set DA1 through DA3.

- A device error will occur on units that do not have a D/A output.

## Toggle and Query Analog/Waveform Output

| Set and Query the D/A Output Terminal (U1 to U3, I1 to I3, P1 to P3, and Psum) Output Items |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Syntax | Command | Output Terminal U1 | :AOUT:ITEM:U1 | <RMS/DC/AC/FND/UMN> |
|  |  | Output Terminal U2 | :AOUT:ITEM:U2 | <RMS/DC/AC/FND/UMN> |
|  |  | Output Terminal U3 | :AOUT:ITEM:U3 | <RMS/DC/AC/FND/UMN> |
|  |  | Output Terminal II | :AOUT:ITEM:I1 < | <RMS/DC/AC/FND/UMN> |
|  |  | Output Terminal 12 | :AOUT:ITEM:I2 < | <RMS/DC/AC/FND/UMN> |
|  |  | Output Terminal 13 | :AOUT:ITEM:I3 < | <RMS/DC/AC/FND/UMN> |
|  |  | Output Terminal P1 | :AOUT:ITEM:P1 | <RMS/DC/AC/FND/UMN> |
|  |  | Output Terminal P2 | :AOUT:ITEM:P2 | <RMS/DC/AC/FND/UMN> |
|  |  | Output Terminal P3 | :AOUT:ITEM:P3 | <RMS/DC/AC/FND/UMN> |
|  |  | Output Terminal Psum | :AOUT:ITEM:P0 | <RMS/DC/AC/FND/UMN> |
|  | Query | Output Terminal U1 | :AOUT:ITEM:U1? |  |
|  |  | Output Terminal U2 | :AOUT:ITEM:U2? |  |
|  |  | Output Terminal U3 | :AOUT:ITEM:U3? |  |
|  |  | Output Terminal It | :AOUT:ITEM:I1? |  |
|  |  | Output Terminal 12 | :AOUT:ITEM:I2? |  |
|  |  | Output Terminal 13 | :AOUT:ITEM:I3? |  |
|  |  | Output Terminal P1 | :AOUT:ITEM:P1? |  |
|  |  | Output Terminal P2 | :AOUT:ITEM:P2? |  |
|  |  | Output Terminal P3 | :AOUT:ITEM:P3? |  |
|  |  | Output Terminal Psum | :AOUT:ITEM:P0? |  |
|  | Response | <RMS/DC/A <br> Returns the | C/FND/UMN> rectification method set | for each terminal. |
| Description |  | Sets or quer (U1 to U3, I | es the output (rectification to I3, and Psum). | method) of the D/A output terminals |
| Example | Command :AOUT:ITE |  | M:U1 RMS |  |
|  | Query :AOUT:ITE |  | M:U1? |  |
|  | Response | (When HEADER ON) :AOUT:ITEM:U1 |  | 1 RMS |
| Note | When waveform output has been specified via the :AOUT:MONitor command, there will be no change to the output from this command. <br> If analog output has been specified, the output operation specified via this command will be performed. <br> - A device error will occur on units that do not have a D/A output. |  |  |  |
| Set and Query the D/A Output Terminal (D/A1 to D/A3) Output Items |  |  |  |  |
| Syntax | Command | Output Terminal D/A1 | :AOUT:ITEM:DA1 | 1 <D/A output item> |
|  |  | Output Terminal D/A2 | :AOUT:ITEM:DA2 | 2 <D/A output item> |
|  |  | Output Terminal D/A3 | :AOUT:ITEM:DA3 | 3 <D/A output item> |
|  | Query | Output Terminal D/A1 | :AOUT:ITEM:DA1 |  |
|  |  | Output Terminal D/A2 | :AOUT:ITEM:DA2? |  |
|  |  | Output Terminal D/A3 | :AOUT:ITEM:DA3 |  |
|  | Response | <D/A output item> See the Measurement Item Specification List for details. |  |  |
| Description |  | Sets or queries the output (rectification method) of the D/A output terminals (U1 to U3, I1 to I3, and Psum). |  |  |
| Example | Command | :AOUT:ITEM:DA1 WP1 |  |  |
|  | Query Response | :AOUT:ITEM:DA1? |  |  |
|  |  | (When HEADER | ON) :AOUT:ITEM:DA | A1 WP1 |
|  |  | (When HEADER |  |  |

Note•A device error will occur on units that do not have a D/A output.

## Set and Query Instrument Display Items (Normal Measurement Items)

| Syntax | Command | Display Area: a to d | :DISPlay[:NORMaI] | <Display a>,<Display b>, <Display c>,<Display d> |
| :---: | :---: | :---: | :---: | :---: |
|  | Query | Display Area: a | :DISPlay:NORMaI:A | <Display a> |
|  |  | Display Area: b | :DISPlay:NORMaI:B | <Display b> |
|  |  | Display Area: c | :DISPlay:NORMaI:C | <Display c> |
|  |  | Display Area: d | :DISPlay:NORMaI:D | <Display d> |
|  |  | Display Area: a to d : | :DISPlay[:NORMaI]? |  |
|  |  | Display Area: a | :DISPlay:NORMaI:A? |  |
|  |  | Display Area: b | :DISPlay:NORMaI:B? |  |
|  |  | Display Area: c | :DISPlay:NORMaI:C? |  |
|  |  | Display Area: d | :DISPlay:NORMaI:D? |  |
|  | Response | <Display a>,<Display b>,<Display c>,<Display d> See List of Measurement Item Specifications for details about the <Display items a to $\mathrm{d}>$ fields. |  |  |
| Description | Command | Sets or queries the items to display in the instrument display areas "a" to "d". |  |  |
| Example | Command | :DISP U1,I1,P1,TIME |  |  |
|  |  | The instrument display area settings are as follows: |  |  |
|  |  | Display Area "a": Voltage (ch1 acdc) |  |  |
|  |  | Display Area "b": Current (ch1 acdc) |  |  |
|  |  | Display Area "c": Active power (ch1 acdc) |  |  |
|  |  | Display Area "d": Integration time |  |  |
|  | Query :DISP? |  |  |  |
|  | Response | (When HEADER ON) : DISPLAY U1,I1,P1,TIME |  |  |
|  |  | (When HEADER OFF) U1,I1,P1,TIME |  |  |
| Note | - The value displayed (instantaneous value, maximum value, or minimum value) |  |  |  |
|  | The HOLD states and the subsequent output values are as follows: |  |  |  |
|  | HOLD State |  | Displayed Content |  |
|  | OFF |  | Instantaneous value |  |
|  | ON |  | HOLD value |  |
|  | Maximum value hold |  | Maximum value |  |
|  | Minimum value hold |  | Minimum value |  |

- If this command is issued while in harmonic wave display mode, use the :DISPlay:MODE command to change to normal display mode.
-The above-mentioned "instantaneous value" corresponds to the averaged value while the value is being averaged.

## Normal Measurement Display Items List

(For :DISPlay[:NORMal], AOUT:ITEM:DA1, etc.)

| Description |  | Parameter List | :DISPlay:NORMalCompatibility | :AOUT <br> :ITEM <br> Compatibility |

Note: Calculation items that do not have a measurement value but could still be displayed on the unit (URF0, etc.) are not included in the table.

| Syntax | Command | :DISPlay:MODE <br> <NORM/HRMS/HCON /HOSRMS/HOSCON> |
| :---: | :---: | :---: |
|  | Query | :DISPlay:MODE? |
|  | Response | <NORM/HRMS/HCON/HOSRMS/HOSCON> |
|  |  | NORM: Normal measurement values |
|  |  | HRMS: Harmonic wave level display, all orders (a: order, b/c/d: harmonic wave measurement) |
|  |  | HCON: Harmonic wave content display, all orders (a: order, b/c/d: harmonic wave measurement) |
|  |  | HOSRMS: Harmonic wave level display, individual orders ( $\mathrm{a} / \mathrm{b} / \mathrm{c} / \mathrm{d}$ : harmonic wave measurement) |
|  |  | HOSCON: Harmonic wave content display, individual orders ( $\mathrm{a} / \mathrm{b} / \mathrm{c} / \mathrm{d}$ : harmonic wave measurement) |
| Description |  | Toggles or queries the content of the display area (normal measurement or harmonic wave measurement). |
| Example | Command | :DISP:MODE NORM |
|  | Query | :DISP:MODE? |
|  | Response | (When HEADER ON) :DISPLAY:MODE NORM |
|  |  | (When HEADER OFF) NORM |

Set and Query the Displayed Order for Harmonic Wave Common Order Display Mode

Syntax Command
Query
Response
Description

Example Command
Query
Response
:DISPlay:HARMonic:ORDer <0 to 50 (NR1)> :DISPlay:HARMonic:ORDer?
<0 to 50 (NR1)>
Sets or queries the order for harmonic wave common order display mode. Although NRf numerical values are accepted, values to the right of the decimal are dropped.
:DISP:HARM:ORD 21
:DISP:HARM:ORD?
(When HEADER ON) :DISPLAY:HARMONIC:ORDER 21 (When HEADER OFF) 21

Note - If the display is in any other mode other than harmonic wave (all orders) display mode, the display will not be immediately affected by this command.
The setting will be applied when the display mode is changed via a command such as :DISPlay:MODE.

Set and Query the Display Items for Harmonic Wave Common Order Display Mode
Syntax Command Display Area:b :DISPlay:HARMonic:B:ITEM <Harmonic wave display item> Display Area: c :DISPlay:HARMonic:C:ITEM <Harmonic wave display item> Display Area:d :DISPlay:HARMonic:D:ITEM <Harmonic wave display item> Display Area: : :DISPlay:HARMonic:B:ITEM? Display Area: c:DISPlay:HARMonic:C:ITEM? Display Area:d :DISPlay:HARMonic:D:ITEM?

```
Set and Query the Displayed Order for Harmonic Wave Individual Order Display Mode
\begin{tabular}{|c|c|c|c|}

| Description |  | Sets or queries the display items for harmonic wave individual order display mode. |
| Example | Command | :DISP:HORDS:A:ITEM HI1 |
|  | Query | :DISP:HORDS:A:ITEM? |
|  | Response | (When HEADER ON) :DISPLAY:HORDERSEL:A:ITEM HI1 |
|  |  | (When HEADER OFF) HI1 |
| Note | - If the mode, Chang | isplay is in any other mode other than harmonic wave (individual order) display e display will not be immediately affected by this command. the display mode via a command such as :DISPlay:MODE. |

## (10) Measurement Value Output

## Query Measurement Data (Normal Measurement Items)

Syntax Query :MEASure[:POWer]? (<Output item 1>...) :MEASure[:NORMal]:VALue? (<Output item 1>...) Up to a maximum of 180 items
<Output item 1><Measurement value 1>,<Output item 2><Measurement value 2>....
See the List of Output Item Specifications for details about the <Measurement item> field.
Output Format

| Header Portion | Data Formats |
| :---: | :---: |
| Measurement Values U,I,P,S,Q,PF, DEG, <br> FREQU,FREQI, UPK,IPK, EFF,UCF,ICF, ITAV,PTAV, URF,IRF, UTHD,ITHD, UCHD,ICHD | NR3 numerical value data (always 10 characters) <br> $\pm$ ddddddE $\pm$ e <br> (dddddd: 6-character numerical value data, including decimal point, <br> e: coefficient 0,3 , or 6 ) |
| Integration Values $\mathrm{IH}, \mathrm{PIH}, \mathrm{MIH}$, WP,PWP,MWP | NR3 numerical value data (always 11 characters) <br> $\pm$ dddddddE $\pm$ e <br> (ddddddd: 7-character numerical value data, including decimal point, <br> e: coefficient 0,3 , or 6 ) |
| Time Values TIME | NR1 numerical value data (always 11 characters) <br> hhhhh,mm,ss (hours, minutes, seconds) |

Outputs the voltage, current, and active power values for ch1.
(When HEADER ON) U1 +150.00E+0;11 +020.00E+0;P1 +03.000E+3 (When HEADER OFF) $\mathbf{+ 1 5 0 . 0 0 E + 0 ; + 0 2 0 . 0 0 E + 0 ; + 0 3 . 0 0 0 E + 3}$
Note - When all output items are set to OFF (immediately after
executing :MEASure:ITEM:ALLClear), the measurement values for the items shown in display areas (a) through (d) will be output.

- You can use the :TRANsmit:SEParator command to change the message unit separator from a semicolon ";" to a comma ",".
- If the display is blank (such as when the range has been changed),
the response message will be "no data" ( $\pm 777.77 \mathrm{E}+9$ ) until the measurement data is displayed.

We recommend only using this function with a fixed range.

- The output of :MEASure? is not affected by the HOLD status.
- If :MEASure[:POWer]? is called with no specified output items immediately after powering on the instrument, U, I, P, S, Q, PF, DEGAC, FREQU, and FREQI will be output for channels 1 through 3 and SUM.
- The output items specified via :MEASure:ITEM commands will not be reset even if a system reset is performed. These items are reset only when the instrument is powered on.

List of Directly Specified :MEASure? Query Items

| Measurement Item | Rectificati on Method | Type | Parameter List |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | ch1 | ch2 | ch3 | SUM |

List of Directly Specified :MEASure? Query Items

[^2]```
Perform and Query a Reset of :MEASure? and :MEASure:HARMonics? Output Items
            Syntax Command :MEASure:ITEM:ALLClear
    Description
                                Clears all outputs set for :MEASure? and :MEASure:HARMonic?
                                via :MEASure:ITEM commands.
        Example Command :MEAS:ITEM:ALLC
        Note - This command turns all output settings OFF.
                            - The output settings immediately after the instrument is powered on are as follows:
                Normal Measurement Items
                    U,I, P, S, Q, PF, DEG, FREQU, and FREQI for channels }1\mathrm{ through }3\mathrm{ and SUM.
                    Harmonic Wave
                            First order effective values HU, HI, and HP for channels 1 through 3 and SUM.
```

## Query:MEASure? Output Items

Syntax Query
Description

Example Query
Response (When HEADER ON) :MEASURE:NORMAL:ITEM U1,U2
(When HEADER OFF) U1,U2
Note - If all output items are turned OFF, this command returns the measurement items displayed on the instrument (in display areas (a) through (d)).

## Description

Example Command
Sets or queries the measurement items for the :MEASure? query as a numerical value between 0 and 255 .
Although NRf numerical values are accepted, values to the right of the decimal are dropped.
:DATA:ITEM 7,0,0,0,0,0
(This enables the output of the voltage, current, and active power on channel 1.)
Query :DATA:ITEM?
Response (When HEADER ON) :DATAOUT:ITEM 7,0,0,0,0,0
(When HEADER OFF) 7,0,0,0,0,0
Note - This command is provided for compatibility with control programs for the existing model 3331.
This command can be used only to set or query AC/DC rectification measurement values.
In order to fully utilize the capabilities of the PW3336 and PW3337, we recommend using the MEASure:ITEM commands.

## Set and Query :MEASure? Output Items

(Measurement status data: instantaneous value, maximum value, minimum value)
Syntax
nstantaneous value Maximum/Minimum value

## Description

Example Command
Query
Response (When HEADER ON) :MEASURE:NORMAL:ITEM:STAT:INST 1
(When HEADER OFF) 1

## Perform and Query a Reset of :MEASure:HARMonic? Output Items <br> Syntax Command :MEASure:HARMonic:ITEM:ALLClear <br> Description <br> Clears all outputs set for :MEASure:HARMonic? <br> via :MEASure:HARMonic:ITEM commands. <br> Example Command :MEAS:HARM:ITEM:ALLC <br> Note - This command turns all output settings OFF. <br> - The output settings immediately after the instrument is powered on are as follows: harmonic wave <br> First order effective values $\mathrm{HU}, \mathrm{HI}$, and HP for channels 1 through 3 and SUM.

## Set and Query:MEASure:HARMonic? Output Items

```
Set and Query:MEASure:HARMonic? Output Items (Order)
    Syntax Command :MEASure:HARMonic:ITEM:ORDer
                            <Lower Limit Order (NR1)>,<Upper Limit Order (NR1)>,<ODD/EVEN/ALL>
            Query :MEASure:HARMonic:ITEM:ORDer?
            Response <Lower Limit Order (NR1)>, <Upper Limit Order (NR1)>,<ODD/EVEN/ALL>
            Lower limit order (NR1): 0 to 50
            Upper limit order (NR1): 0 to 50
                                    (the lower limit must be less than or equal to the upper limit)
                                    ODD: Odd orders only
                                    EVEN: Even orders only
                                    ALL: All orders
Description Sets or queries the measurement items(Order) for
    the :MEASure:HARMonic? query.
                            The numerical value is accepted in NRf format, but any data after the
                                    decimal point is rounded off.
Example Command
                            :MEAS:HARM:ITEM:ORD 1,15,ODD
                            Sets the output to an odd order between 1 and 15.
        Query :MEAS:HARM:ITEM:ORD?
        Response (When HEADER ON) :MEASURE:HARMONIC:ORDER 1,15,ODD
            (When HEADER OFF) 1,15,ODD
    Note - This command is used along with the :MEASure:HARMonic:ITEM:LIST or
        :MEASure:HARMonic:ITEM:xxx commands to specify the harmonic wave output items.
```

Set and Query :MEASure:HARMonic? Output Items (Measurement status data:

## Description

Example Command

## Query

Response

Sets the measurement data status (instantaneous value, maximum value, minimum value) output items as numerical values between 0 and 1 .
Although NRf numerical values are accepted, values to the right of the decimal are dropped.
INST indicates the status for the instantaneous value at the time when the data is acquired.
MAXmin indicates the total from the time the maximum and minimum values were last reset.

For information about Status data, refer to :MEASure:ITEM:STATUS (page 67) for details.
:MEAS:HARM:ITEM:STAT:INST 1
Specifies to turn ON measurement status output.
:MEAS:HARM:ITEM:STAT:INST?
(When HEADER ON) :MEASURE:HARMONIC:ITEM:STAT:INST 1
(When HEADER OFF) 1

| Set and Query :MEASure:HARMonic? Output Items (Instantaneous, Maximum, and Minimum Values for the Harmonic Wave Voltage Content Ratio) |  |  |  |  |  |  |  |  |  |

| Response | <Output item (NR1)> |  |  |  |  |  |  |  |
|  | bit7 | bit6 | bit5 | bit4 | bit3 | bit2 | bit1 | bit0 |
|  |  |  |  |  |  |  |  | HPCON |

## Description

Example Command

Query
Response (When HEADER ON) :MEASURE:HARMONIC:ITEM:PPHASE:CH1 1 (When HEADER OFF) 1

Note - This command is used along with the :MEASure:HARMonic:ITEM:ORDer command to specify the harmonic wave output order.

- If the specification is the same as that for the :MEASure:HARMonic:ITEM:LIST command, the command issued afterwards takes precedence.
- Harmonic wave phase angle data cannot be displayed on the instrument. This data can only be obtained through communications commands.

## (11) Communications Settings

## Set and Query RS-232C Settings

## Set and Query the RS-232C Baud Rate Setting

Syntax Command :RS232c:BAUD <9600BPS/38400BPS> Query :RS232c:BAUD?
Response <9600BPS/38400BPS>

Description Example

Command Sets or queries the instrument's RS-232C baud rate setting.

Query
Response (When HEADER ON) :RS232C:BAUD 9600BPS (When HEADER OFF) 9600BPS
Note This query can be used with the RS, LAN, and GP-IB interfaces. This setting command can only be used with the LAN and GP-IB interfaces.

Set and Query the RS-232C Execution Confirmation Message Setting

Note - This command and query can be executed even when a system error has occurred.

- When set to ON, operation may become unstable if the controller (the device that sends commands) does not receive an execution confirmation message response. - This command is used to synchronize operation with the controller over RS-232C, but can also be used with the GP-IB and LAN interfaces.
- However, be sure to always receive sent execution confirmation messages. This query and setting command can be used with the RS, LAN, and GP-IB interfaces.

## Query RS-232C Communications Errors

Syntax Query :RS232c:ERRor?
Response <Communications error information (NR1)>

| 128 | 64 | 32 | 16 | 8 | 4 | 2 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| bit7 | bit6 | bit5 | bit4 | bit3 | bit2 | bit1 | bit0 |
|  |  |  |  |  | Over run | Framing |  |

| Description |  | Returns RS-232C communications error information in NR1 format and clears that information. <br> The communications error information can also be reset to 0 via the *CLS command. <br> The response message has no header. <br> bit 2: Overrun error (missed data) <br> bit 1: Framing error (erroneous data read) |
| :---: | :---: | :---: |
| Example | Query | :RS232:ERR? |
|  | Respons | 4 |

Note - This command can be executed even when a system error has occurred.

- This query can be used with the RS, LAN, and GP-IB interfaces

## Set and Query the LAN IP Address Execution Confirmation Message Setting

\author{
Syntax Command :IP:ADDRess <Address 1 (NR1)>,<Address 2 (NR1)>,<Address 3 (NR1)>,<Address 4 (NR1)> Query :IP:ADDRess? <br> Response <Address 1 (NR1)>,<Address 2 (NR1)>,<Address 3 (NR1)>, <Address 4 (NR1)> <br> <Address 1 to Address 4 (NR1)> $=0$ to 255 <br> Description

Example <br> | Command | IP:ADDR 192,168,1,1 |  |
| :--- | :--- | :--- |
| Query | IP:ADDR? |  |
| Response | (When HEADER ON) | :IP:ADDRESS 192,168,1,1 |
|  | (When HEADER OFF) | 192,168,1,1 | <br> Note - The LAN communications settings will be changed after the command is sent. <br> All established connections before the settings were changed will be disconnected. <br> - This query can be used with the RS-232C, LAN, and GP-IB interfaces. <br> - This setting command can be used with the RS-232C and GP-IB interfaces.

}

| Set and Query the LAN Default Gateway Address Execution Confirmation Message Setting |  |  |
| :---: | :---: | :---: |
| Syntax | Command | :IP:DEFaultgateway |
|  |  | <Address 1 (NR1)>,<Address 2 (NR1)>,<Address 3 (NR1) >,<Address 4 (NR1)> |
|  | Query | :IP:DEFaultgateway? |
|  | Response | <Address 1 (NR1)>,<Address 2 (NR1)>,<Address 3 (NR1)>, |
|  |  | <Address 4 (NR1)> |
|  |  | <Address 1 to Address 4 (NR1)> $=0$ to 255 |
| Description Example |  | Sets or queries the default gateway address for the instrument. |
|  | Command | :IP:DEF 192,168,1,250 |
|  | Query | :IP:DEF? |
|  | Response | (When HEADER ON) : IP:DEFAULTGATEWAY 192,168,1,250 |
|  |  | (When HEADER OFF) 192,168,1,250 |

Note - The LAN communications settings will be changed after the command is sent. All established connections before the settings were changed will be disconnected.

- This query can be used with the RS-232C, LAN, and GP-IB interfaces.
- This setting command can be used with the RS-232C and GP-IB interfaces.

```
Set and Query the LAN Subnet Mask Execution Confirmation Message Setting
            Syntax Command :IP:SUBNetmask
                                <Address 1 (NR1)>,<Address 2 (NR1)>,<Address 3 (NR1)>,<Address 4 (NR1)>
            Query :IP:SUBNetmask?
            Response <Address 1 (NR1)>,<Address 2 (NR1)>,<Address 3 (NR1)>,
                        <Address 4 (NR1)>
                            <Address 1 to Address 4 (NR1)> = 0 to 255
Description
    Example
            Command :IP:SUBN 255,255,255,0
            Query :IP:SUBN?
            Response (When HEADER ON) :IP:SUBNETMASK 255,255,255,0
                (When HEADER OFF) 255,255,255,0
Note - The LAN communications settings will be changed after the command is sent. All established connections before the settings were changed will be disconnected.
- This query can be used with the RS-232C, LAN, and GP-IB interfaces.
- This setting command can be used with the RS-232C and GP-IB interfaces.
```

## Query GP-IB Settings

| Syntax | Query | :GPIB? |
| :---: | :---: | :---: |
|  | Response | <GP-IB address (NR1)> |
| Description Example |  | <GP-IB address (NR1)> $=0$ to 30 |
|  |  | Returns the GP-IB address setting as a string. |
|  | Query | :GPIB? |
|  | Response | (When HEADER ON) :GPIB:ADDRESS 5 |
|  |  | (When HEADER OFF) 5 |
| Note | -This qu | can be used with the RS-232C, LAN, and GP-IB interfaces. |
|  | -If GP | or implemented by the unit, a device error will occur. |

## Set and Query the GP-IB Address

| Syntax | Command | :GPIB:ADDRess <GPIB address (NR1)> |
| :---: | :---: | :---: |
|  | Query | :GPIB:ADDRess? |
|  | Response | <GP-IB address (NR1)> |
|  |  | <GP-IB address (NR1)> $=0$ to 30 |
| Description Example |  | Sets or queries the GP-IB address of the instrument. |
|  | Command | :GPIB:ADDR 5 |
|  | Query | :GPIB:ADDR? |
|  | Response | (When HEADER ON) :GPIB:ADDRESS 5 |
|  |  | (When HEADER OFF) 5 |
| Note | - This | ry can be used with the RS-232C, LAN, and GP-IB interfaces. |
|  | - This | g command can only be used with the RS-232C and LAN interface |
|  | - If GP | ot implemented by the unit, a device error will occur |

```
Set and Query Response Message Headers ON/OFF Status
            Syntax
```

Command

Query
Response <ON/OFF>
ON: A header is added to the response message.
OFF: No header is added to the response message.
Description
Example
Comman
Query
HEAD?
Response (When HEADER ON) :HEADER ON
(When HEADER OFF) OFF

## Change to the Local State

Syntax Command
Description

Example Command
Note - This command and query can be executed even when a system error has occurred.

## Set and Query the Message Unit Separator

| Syntax | Command | :TRANsmit:SEParator <0/1> |  |
| :---: | :---: | :---: | :---: |
|  | Query | :TRANsmit:SEParator? |  |
| Response <0/1> |  |  |  |
| 0: Semicolon ";" (default setting) |  |  |  |
|  |  |  |  |
| Description |  | Sets or queries the message unit separator used in response messages. Although NRf numerical values are accepted, values to the right of the decimal are rounded to the nearest integer. |  |
| However, if headers are turned ON the actual output will be separated by semicolons, even if the separator has been set to comma. |  |  |  |
| Example | Command | :TRAN:SEP 0;:HEAD OFF;:MEAS? U1,I1 | (Specify the separator to be a semicolon.) |
|  | Response | 10.038E+0[+12.719E+0 | (Separator is a semicolon.) |
|  | Command | :TRAN:SEP 1;:HEAD OFF;:MEAS? U1,I1 | (Specify the separator to be a comma.) |
|  | Response | $10.038 \mathrm{E}+0$ ¢ $+12.719 \mathrm{E}+0$ | (Separator is a comma.) |
|  | Command | :TRAN:SEP 0;:HEAD ON;:MEAS? U1,I1 | (Specify the separator to be a semicolon.) |
|  | Response | U1 10.038E+0[11 +12.719E+0 | (Separator is a semicolon.) |
|  | Command | :TRAN:SEP 1;:HEAD ON;:MEAS? U1,I1 | (Specify the separator to be a comma.) |
|  | Response | U1 10.038E+0미 $1+12.719 \mathrm{E}+0$ | (Separator is a semicolon.) (Because headers are turned ON.) |
|  | Query | :TRAN:SEP? |  |
|  | Response | (When HEADER ON) :TRANSMIT:SEPARATOR 1 |  |
| (When HEADER OFF) 1 |  |  |  |

Note - Always turn headers OFF (:HEAD OFF) when changing the message unit separator.

- This command and query can be executed even when a system error has occurred.

## Set and Query the Message Unit Terminator

| Syntax | Response | :TRANsmit:TERMinator <0/1> :TRANsmit:TERMinator?$<0 / 1>$ |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | S/F Setting | $\begin{gathered} \text { RS-232c } \\ \text { LAN } \end{gathered}$ | GP-IB |
|  |  | 0 | LF | LF with an EOI |
|  |  | 1 | CR+LF | LF with a CR+EOI |
| Description |  | Sets or queries the message unit terminator used in response messages. Although NRf numerical values are accepted, values to the right of the decimal are rounded to the nearest integer. |  |  |
| Example | Command | :TRAN:TERM 1 |  |  |
|  | Query | :TRAN:TERM? |  |  |
|  | Response | (When HEADER ON) :T | T:TERMIN |  |
|  |  | (When HEADER OFF) 1 |  |  |
| Note | - This c | mand and query can be | d even when | error has occurred. |

## Status Descriptions

Integration Reset : Integration calculations are stopped and the integration time and integration value are reset.
(The INTEGRATOR RUN indicator is OFF.)
Integration START
Integration STOP
Continuous
Integration calculations are being performed (the INTEGRATOR RUN indicator is ON ).

HOLD
System Error
Integration calculations are stopped (the INTEGRATOR RUN indicator is flashing).
The display is updated each time sampling is performed (continuous display).
: The display is currently held and/or maximum/minimum values are being held. (The HOLD, MAX, or MIN indicator is ON.)
: Err. 1 to Err. 4 is currently displayed.

## 4 Operation Problems (Communications)

When communications are not operating properly, check the following causes and try the listed solutions.

* Problems and solutions with no specific interface icon ( $\sqrt{\text { RS-232C LPPIB }}$ LAN $)$ can be applied for all interfaces.

| Problem | Cause / Solution |
| :---: | :---: |
| The RS-232C/LAN/GP-IB interface does not work at all. | - Are all cables properly connected? <br> (See Chapter 4 in the Instruction Manual for the instrument.) <br> - Are all connected devices powered ON? <br> - Are all the cables used the correct types? <br> (See Chapter 4 in the Instruction Manual for the instrument.) <br> - Do the set communications conditions (RS baud rate, etc.) on the instrument match up with the controller? $85-2326$ <br> - Are the address settings on the instrument the same as the controller's destination address? GP-IB <br> - Does the instrument have the same IP address setting as another device? GP-IB <br> - Are the communications settings (IP address, subnet mask, default gateway) all correct? LAN <br> - Are these IP address settings the same as those on another device? LAN <br> - Is the TCP/IP port number correct? <br> (Connect to TCP/IP port 3300.) |
| Communications are not working properly. | - Are the instrument and controller RS-232C settings (baud rate, data length, parity, stop bit) the same? $8 S-2326$ <br> The data length ( 8 bits), parity (none), and stop bit (1) are fixed values. <br> - Is the controller's message terminator (delimiter) setting the same as the instrument setting? |
| After communications, the keys on the instrument no longer work. | - Press the SHIFT/EXIT/LOCAL keys on the instrument panel to take the instrument out of the Remote state. <br> Or, send the :LOCAL command. <br> - Are you sending the LLO (Local Lock Out) command (see page 12) to the instrument? |
| The program stops running when I try to read data with an INPUT statement. | - You must send a query before the INPUT statement. <br> - Did an error occur in the query sent before the INPUT statement? |
| The GP-IB bus stops when I try to read data with an INPUT@(ENTER) statement GP-IB | - You must send a query before the INPUT@(ENTER) statement. <br> - Did an error occur in the query sent before the INPUT statement? |

| I sent a command but nothing happens. | - Use the *ESR? query to check the Standard Event Status Register for items that have caused an error. (See page 36.) <br> - Use the RS232c:ERRor? query to check for any RS-232C communications errors. (See page 104.) <br> - Set RS232c:ANSWer to ON to enable execution confirmation. (See page 104.) |
| :---: | :---: |
| I sent multiple queries but received no responses back. | - Did an error occur? <br> - Be sure to check for and read the response after each query is sent. <br> To read all query responses at once, use the message separator and put all the queries on a single line. (See page 3.) Are you using the *IDN? query? <br> - Query commands after an *IDN? query are not executed. |
| The query response message is not the same as what is displayed on the instrument panel. | - Response messages are generated when the query is received by the instrument. <br> Therefore, in some cases the message may not match what is displayed on the panel when the response is read by the controller. |
| Sometimes service requests are not executed GP-IB | - Are the Service Request Enable and Event Status Enable registers set correctly? (See page 36.) <br> - Clear all the event registers with the *CLS command at the end of your SRQ processing subroutine. <br> If the event bits are not cleared, the service requests will not be executed in the same event. (See page 36.) |
| I cannot obtain the averaged data. | - If any measurement-related settings such as the wiring, voltage range, current range, number of times to perform averaging, VT ratio, CT ratio, etc. are changed, averaging is restarted. To obtain the average values, wait until the first averaging process finishes or monitor the AVG flag in ESRO? as shown below. <br> 1. After changing these settings, wait until the first set of data is displayed and clear the event flags. <br> (Example: Changing the current range to 1 A ) :CURR:RANG 1;*WAl;*CLS <br> 2. Monitor the AVG flag to see when it changes to 1 . Read Event Status Register 0 with an :ESR0? query. Repeat until the AVG flag (bit 3 ) changes to 1 . <br> 3. Read the data once the AVG flag changes to 1 . :MEAS? |

## 5 Device Documentation Requirements

Information Related to Standard Execution Methods Based on IEEE488.2

(1) IEEE488.1 Interface Functions

See Chapter 4. 4 "GP-IB Interface Settings and Connection" in the Instruction Manual for the instrument.
(2) Operation When the Address Is Set to a Value Outside the Range of 0 to 30 Settings outside the range of 0 to 30 are not allowed.
(3) Recognizing When a User Changes the Initial Address Setting The new address is recognized at the moment when the user changes the address.
(4) Device Settings When the Instrument is Powered On All status information is cleared. Other data is backed up. However, header and response message terminator settings are reset.
(5) Message Exchange Option Notation

- Input Buffer Capacity and Operation

See: Input Buffer (page 5)

- Queries that Return Multiple Response Message Units
:VOLTage?,:VOLTage1?,:VOLTage2?,:VOLTage3? • • • • • • • • • • • • • • (page 44)
:CURRent?,:CURREnt1?,:CURRent2?,:CURRent3? • • • • • • • . . . . . . . . • (page 47)
:FREQuency?,:FREQuency1?,:FREQuency2?,:FREQuency3? • • • • • • • • • • (page 49)
:SCALE?,:SCALE1?,:SCALE2?,:SCALE3? • • • • • • • • • • • • • • • • (page .51)

:MEASure? • • • • • • • . . . . . . . . . . . . . . . . . . . . . . . . . . • (page 60)
:MEASure:ITEM? • • • . . . . . . . . . . . . . . . . . . . . . . . . . . . . . • (page 65)
:MEASure:HARMonic? • • . . . . . . . . . . . . . . . . . . . . . . . . . . . . • (page 89)
:RS232c? • • • • • • • • • • • • • • • • • • • • • • • • • • (page 103)
- Queries that Generate a Response When Checking Syntax

All queries generate a response when checking syntax.

- Queries that Generate a Response When Read

There are no queries that generate a response when read by the controller.

- Coupled Commands

There are no such coupled commands.
(6) List of Functional Requirements for Device-specific Commands and Compound Command Program

Header Specifications

- Program messages
- Program message terminators
- Program message units
- Program message unit separators
- Command message units
- Query message units
- Command program headers
- Query program headers
- Program data
- Character program data
- Binary numerical value program data
- Compound command program headers
(7) Block Data Buffer Capacity Limits

Block data is not used.
(8) List of Program Data Elements Used in <Expressions> and the Maximum Number of Nested Levels Allowed in Sub-expressions (Including Syntax Restrictions Imposed by the Device on <Expressions>) Sub-expressions are not used. The program data elements used in expressions are character program data and binary numerical value program data.
(Excluding *IDN?)
(9) Query Response Syntax

See: Message Reference(page 33)
(10)Message Transmission Interference Between Devices that Do Not Conform to the Defined Response Message Rules
Messages cannot be sent between devices.
(11)Block Data Response Capacity There are no block data responses.
(12)List of Common Commands and Queries Used

See: Message List(page 15)
(13)Device Status After a Revised Query Completes Successfully The *CAL? command is not used.
(14)"*DDT" Command

The *DDT? command is not used.
(15)Macro Commands

Macros are not used.
(16)Identification-related Queries and "*IDN?" Query Responses

See: Standard Commands(page 34)
(17)Capacity of the User Data Storage Area Protected When the "*PUD" Command or "*PUD" Query Is Executed
The *PUD? command and *PUD query are not used.
There also is no user data storage area.
(18)Resources When the "RDT" Command or "*RDT?" Query Is Used

The *RDT? command and *RDT query are not used.
There also is no user data storage area.
(19)Situations When the "*RST", "*LRN?", "*RCL", and "*SAV" Commands Are Affected

The *LRN?, *RCL, and *SAV commands are not used.
The *RST command resets the instrument back to its initial state.
See: Standard Commands (page 34) and Initialization Items (page 13)
(20)Range of Self-testing Performed by the "*TST?" Query

See: Standard Commands(page 34)
(21)Additional Status Data Structures Used for Reporting the Device Status

See: Event Registers (page 8)
(22)Are Commands Overwrap or Sequential Commands

All commands are sequential.
(23)Standards for Functions Required When Operation Complete Messages Are Generated as Command Responses
Operation complete messages are generated when analysis of the command is performed.

[^0]:    Note:
    A command error will always occur if a message is spelled incorrectly or if any data is present after a query.
    When an error occurs with a query, no response message will be generated for that query.

[^1]:    $\circ$ : The command is executed.
    x : A device-dependent error occurs.

[^2]:    Note: $\mathrm{U} \rightarrow \mathrm{V}, \mathrm{I} \rightarrow \mathbf{A}, \mathrm{P} \rightarrow \mathbf{W}, \mathbf{S} \rightarrow \mathbf{V A}, \mathbf{Q} \rightarrow \mathbf{V A R}, \mathrm{IH} \rightarrow \mathrm{AH}, \mathrm{PWP} \rightarrow \mathrm{PWH}, \mathrm{MWP} \rightarrow \mathrm{MWH}, \mathbf{W H} \rightarrow \mathbf{W P}$,
    and $\mathbf{W H} \rightarrow$ INTEG are all valid substitutions.
    For example, :MEAS? U1 and :MEAS? V1 produce the same response. However, U is always returned as the header.
